

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

#### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + Refrain from automated querying Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

#### **About Google Book Search**

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at http://books.google.com/

U.S. Bureau of the Census, Statistical Abstract of the United St (108th edition.) Washington, DC, 1987

For sale by Superintendent of Documents, U.S. Government Pri Washington, DC 20402, Tel. (202) 783–3238, or any U.S. De Commerce district office.

#### **Preface**

The Statistical Abstract of the United States, published since 1878, is the standard summary of statistics on the social, political, and economic organization of the United States. It is designed to serve as a convenient volume for statistical reference and as a guide to other statistical publications and sources. The latter function is served by the introductory text to each section, the source note appearing below each table, and Appendix I, which comprises the Guide to Sources of Statistics, the Guide to State Statistical Abstracts and the Guide to Foreign Statistical Abstracts.

This volume includes a selection of data from many statistical publications, both governmental and private. Publications cited as sources usually contain additional statistical detail and more comprehensive discussions of definitions and concepts than can be presented here. Data not available in publications issued by the contributing agency but obtained from unpublished records are identified in the source notes as "unpublished data." More information on the subjects covered in tables so noted may generally be obtained from the source.

Except as indicated, figures are for the United States as presently constituted. Although emphasis in the Statistical Abstract is given primarily to national data, many tables present data for regions and individual States and a smaller number for metropolitan areas and cities. Appendix II, Metropolitan Area Concepts and Components, presents explanatory text, a complete current listing and population data for metropolitan statistical areas (MSA's) the primary metropolitan statistical areas (PMSA's), and the consolidated metropolitan statistical areas (CMSA's). Table 34 in section 1 presents selected population characteristics for MSA's with population of 250,000 or more. Statistics for the Commonwealth of Puerto Rico and for outlying areas of the United States are included in many State tables and are supplemented by information in section 30. Additional information for States, cities, counties, metropolitan areas, and other small units, as well as more historical data, are available in various supplements to the Abstract (see inside back cover).

USA Statistics in Brief, 1988, the pocket-size loose insert in front of the book, is available separately. Price information can be obtained from, and orders sent to, U.S. Bureau of the Census, Customer Services, Washington, DC 20233. A 25 percent discount will be allowed on orders of 100 copies or more sent to the same address.

Changes in this edition.—Long-time users may recall the inclusion of a user questionnaire in the 1984 edition of the Abstract. By the spring of 1986, 2,733 responses had been received and analyzed (representing a response rate of 8.0%). This edition reflects many changes incorporated as a result of the respondents' valuable feedback. We hope you find them useful and we thank you for your participation.

Several sections have been expanded based on the fact they ranked high in user use and/or interest, but relatively low in the amount of tabular material presented. These include the sections on Vital Statistics, Prices, and Business Enterprise. Conversely, several sections have been reduced in the amount of tabular material presented because of the opposite relationship between user use and data presentation. Among these are Geography, Governments, Social Insurance, Transportation, Agriculture, and Mining. Finally two sections, Forests and Fisheries, have been combined.

Users' open-ended comments indicated many areas for which they would like to have new or expanded coverage. As a result, many new tables have been introduced. Among them are several tables on the elderly, from the 1984 Supplement on Aging to the National Health Interview Survey; new national and State population projections; and 1986 election results for the U.S. House of Representatives, by congressional district. In addition, a new table presents data on worklife indices. Finally, users expressed interest in international data. We have consequently expanded our Guide to Sources appendix to include a listing of selected foreign statistical abstracts and added several new tables to the Comparative International Statistics section.

vi Preface

Statistics in this edition are generally for the most recent year or period available by Octi 1987. Each year almost 1,500 tables and charts are reviewed and evaluated; new tables and chord current interest are added, continuing series are updated, and less timely data are condense eliminated. Text notes and appendixes are revised as appropriate.

In all, there are 100 new tables, distributed among 19 of the 31 sections. In addition, gra charts have been revised or updated and many sections have undergone tabular rearranger and format changes designed to improve the organization of subject matter. Of the tables incluin the 1987 edition, 150 were omitted from this issue. The omissions represent primarily tables which comparable details appear in other tables or for which no recent data are available, or ta for which the subject matter shown was considered relatively less important in the light of space required for presentation.

Among the new tables relating to people and their concerns are:

State population projections, by age, T. 29
The elderly—contacts with children, by age
group and living arrangement, T. 42
Low birth weight and births to teenage mothers and unmarried women, T. 89

AIDS cases reported, by patient characteristic, T. 170

Personal health practices, T. 178

Characteristics of private elementary and ondary schools and teachers, T. 224
Crimes against the elderly, T. 272
Participation in sports activities, T. 374
Child care arrangements of employed mothers, T. 596
Work schedules, by sex, industry, and o pation, T. 615

Government and economic activities are reflected in new tables on:

Financial support of the arts by private business, T. 384

Votes cast for U.S. representatives, by congressional district, T. 402

Political action committees, T. 426

Disposable personal income per capita, T. 680

Per capita money income for the 50 largest cities, T. 709

Fixed-weight price indices, T. 733
Financial summary of savings institutions
785

Mortgage delinquency, foreclosure rates, mortgage insurance, T. 794 Minority-owned business firms, T. 840

U.S. parent companies and foreign affilial T. 869

Residential energy expenditures, T. 915

Historical statistics.—Specific headnote references in this Abstract link many tables to ex data shown in Historical Statistics of the United States, Colonial Times to 1970. (See Appendit pp. 898 and 899.)

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and M may also be found in the *State and Metropolitan Area Data Book, 1986*. For cross-references Appendix V, pages 900 and 901.

Statistical reliability and responsibility.—The contents of this volume were taken from a sources. All data from either censuses and surveys or from administrative records are subjective arror arising from a number of factors: Sampling variability (for statistics based on samples), reling errors in the data for individual units, incomplete coverage, nonresponse, imputations, and essing error. (See also Appendix III, pp. 882–897.) The Bureau of the Census cannot accept responsibility for the accuracy or limitations of the data presented here, other than for those it collects. The responsibility for selection of the material and for proper presentation, how rests with the Bureau.

For additional information on data presented.—Please consult the source publications able in local libraries or write to the agencies indicated in the source notes. Write to the Burn the Census only if it is cited as the source.

Suggestions and comments.—Users of the Statistical Abstract and its supplements (see back cover) are urged to make their data needs known for consideration in planning future of Suggestions and comments for improving coverage and presentation of data should be sent Director, U.S. Bureau of the Census, Washington, DC 20233.

The following symbols used in the tables throughout this book, are explained in condensed form in footnotes to the tables where they appear:

- Represents zero or rounds to less than half the unit of measurement shown.
- B Base figure too small to meet statistical standards for reliability of derived figure.
- Figure withheld to avoid disclosure of information pertaining to a specific organization or individual.
- NA Data not enumerated, tabulated, or otherwise available separately.
- NS Percent change irrelevant or insignificant.
- S Figure does not meet publication standards for reasons other than that covered by symbol B, above.
- X Figure not applicable because column heading and stub line make an entry impossible, absurd, or meaningless.
- Z Entry would amount to less than half the unit of measure shown. In many tables, details will not add to the totals shown because of rounding.

#### Example of table structure:

Headnotes immediately below table titles provide information important for correct interpretation or evaluation of the table as a whole or for a major segment of it.

Includes 15-19 year olds.

Footnotes below the bottom rule of tables give information relating to specific items or figures within the table.

Unit indicators ("In thousands," "In millions of dollars," etc.) are usually given in boldface type as the first elements of the headnote. In tables where several units are used, the unit indicators are generally given in the stub or unit column or in the column headings.

Parallel vertical rules are used to the right of a total column to indicate—

- (1) that the components which follow add to the total (e.g., tables 1, 18, 35, etc.);
- (2) in the case of derived figures, that the underlying data are additive to their total (e.g., table 18 for ratios, table 51 for percentages, table 84 for rates and table 88 for medians).

Heavy vertical rules are used-

s zero or rou

de to zero.

- In tables where the stub is continued into one or more additional columns across the table to separate each segment of stub and its accompanying data columns from the continued segments (e.g., tables 2, 8, 10, etc.);
- (2) to set off independent sections of a table (e.g., tables 1, 6, 22, etc.).

**Averages.** An average is a single number or value that is often used to represent the "ty value" of a group of numbers. It is regarded as a measure of "location" or "central tendency group of numbers.

The arithmetic mean is the type of average used most frequently. It is derived by summin individual item values of a particular group and dividing the total by the number of items. The metic mean is often referred to as simply the "mean" or "average."

The *median* of a group of numbers is the middle number or value when each item in the grammanged according to size (lowest to highest or vice versa); it generally has the same numb items above it as below it. If there is an even number of items in the group, the median is take the average of the two middle items.

Per capita (or per person) quantities. A per capita figure represents an average compute every person in a specified group (or population). It is derived by taking the total for an item as income, taxes, or retail sales) and dividing it by the number of persons in the specified potion.

Index numbers. An index number is a measure of difference or change, usually expressed percent, relating one quantity (the variable) of a specified kind to another quantity of the same Index numbers are widely used to express changes in prices over periods of time but may all used to express differences between related subjects for a single point in time.

To compute a price index, a base year or period is selected. The base year price (of the modity or service) is then designated as the base or reference price to which the prices for years or periods are related. Many price indexes use the year 1967 as the base year; in tables is shown as "1967 = 100." A method of expressing the price relationship is:

#### Price of a set of one or more items for related year

Price of the same set of items for base year

The result multiplied by 100 provides the index number. When 100 is subtracted from the number, the result equals the percent change in price from the base year.

Average annual percent change. Unless otherwise stated in the Abstract (as in Section 1, lation), average annual percent change is computed by use of a compound interest formula formula assumes that the rate of change is constant throughout a specified compounding (one year for average annual rates of change). The formula is similar to that used to compubalance of a savings account which receives compound interest. According to this formula, end of a compounding period the amount of accrued change (e.g., school enrollment or banlest) is added to the amount which existed at the beginning of the period. As a result, ow (e.g., with each year or quarter), the same rate of change is applied to a larger and larger

The exponential formula, which is based on continuous compounding, is often used to m population change. It is preferred by population experts because they view population and it tion-related subjects as changing without interruption, ever ongoing. Both exponential an pound interest formulas assume a constant rate of change. The former, however, appl amount of change continuously to the base rather than at the end of each compounding

When the average annual rates are small (e.g., less than 5 percent), both formulas give the same results. For an explanation of these two formulas as they relate to population, a Bureau of the Census, *The Methods and Materials of Demography*, vol. 2, 3d printing (rev. pp. 372-381.

Current and constant dollars. Statistics in some tables in a number of sections are ex in both current and constant dollars (see, for example, table 688, section 14). Current dollar reflect actual prices or costs prevailing during the specified year(s). Constant dollar figures mates representing an effort to remove the effects of price changes from statistical series in dollar terms. In general, constant dollar series are derived by dividing current dollar estit the appropriate price index for the appropriate period (for example, the Consumer Price Interesult is a series as it would presumably exist if prices were the same throughout, as in year—in other words as if the dollar had constant purchasing power. Any changes in this dollar series would reflect only changes in real volume of output, income, expenditures, measure.

# Telephone Contact List

To help Abstract users find more data and information about statistical publications, we are issuing this list of contacts for Federal agencies with major statistical programs. The intent is to give a single, first-contact point-of-entry for users of statistics. These agencies will provide general information on their statistical programs and publications, as well as specific information on how to order their publications,

#### Section 1

### Population

This section presents statistics on the growth, distribution, and characteristics of the U.S. popularin. The principal source of these data is the Bureau of the Census, which conducts a decennial news of population, a monthly population survey, a program of population estimates and projectures, and a number of other periodic surveys relating to population characteristics. For a list of levant publications, see the Guide to Sources in Appendix I.

Decennial censuses.—The U.S. Constitution provides for a census of the population every 10 ers, primarily to establish a basis for apportionment of members of the House of Representatives nong the States. For over a century after the first census in 1790, the census organization was a mporary one, created only for each decennial census. In 1902, the Bureau of the Census was tablished as a permanent Federal agency, responsible for enumerating the population and also r compiling statistics on other subjects.

The census of population is a complete count. That is, an attempt is made to account for every irson, for each person's residence, and for other characteristics (sex, age, family relationships, c.). Since the 1940 census, in addition to the complete count information, some data have been tained from representative samples of the population. In the 1980 census, two sampling rates are employed. For most of the country, one in every six households (about 17 percent) received a long form or sample questionnaire; in areas estimated to have fewer than 2,500 inhabitants, ery other household (50 percent) received the sample questionnaire to enhance the reliability of imple data in small areas. Exact agreement is not to be expected between sample data and the implete census count. Sample data may be used with confidence where large numbers are infived and assumed to indicate trends and relationships where small numbers are involved.

Three different census counts for the resident population in 1970 are shown in the tables: 13,211,926; 203,235,296; and 203,302,031. The first is the initial tabulated count, the second is a official count, and the third contains the latest revisions. Breakdowns of the revised count of 13,302,031 are not available for demographic characteristics and may not be available for some vets of geography. The complete count data from the 1980 census shown in this edition are constant with figures published in the 1980 census final reports, series PC80-1-A.

Census data presented here have not been adjusted for underenumeration. Results from the raluation program for the 1980 census did not produce a definitive estimate of the undercount, but dishow that coverage improved substantially over previous censuses. The 1980 Post-Enumeration ogram (PEP) estimates of overall coverage ranged between a 1.0 percent overcount and a 2-direct undercount; Demographic Analysis (DA) estimated the net undercount at between 1.0 and 2 percent. Consistent estimates of census coverage for the last 5 censuses (1940-80) have been spared by the method of demographic analysis. For one set of estimates, demographic analysis lows a net underenumeration of about 3.2 million persons in 1980, 6.1 million in 1970, and 6.2 lilion in 1980. Among the persons not counted in 1980 about 1.5 million were white-and-other ces and 1.7 million were black. The overall rate of net underenumeration in 1980, according to is set of estimates, was 1.4 percent. In 1970, the rate was 2.9 percent as compared with 3.5 incent in 1980 and 4.4 percent in 1950. The percent net undercount of blacks—while still high lative to the rest of the population—dropped from 8.0 percent in 1970 to 5.9 percent in 1980. See the Coverage of Population in the 1980 Cansus, Evaluation and Research Reports, PHC80-E4, rithcoming, for a discussion of the various estimates of census coverage.

Current Population Survey (CPS).—This is a monthly nationwide survey of a scientifically sected sample representing the noninstitutional civilian population. The sample is located in 729 test comprising approximately 1,200 counties and independent cities with coverage in every State at the District of Columbia and is subject to sampling error. At the present time, about 71,000 tueing units or other living quarters are assigned for interview at any time, of which about 59,500 to occupied by households eligible for interview; of these, in turn, between 4 and 5 percent are, it various reasons, unavailable for interview.

While the primary purpose of CPS is to obtain monthly statistics on the labor force, it also as a vehicle for inquiries on other subjects. Using CPS data, the Bureau issues a series of putions under the general title of Current Population Reports, which cover population characte (series P-20), consumer income (series P-60), special studies (series P-23), and other topics.

Estimates of population characteristics based on the 1980 CPS will not necessarily agree the counts from the 1980 census because the CPS and the 1980 census used different proces for collecting and processing the data for racial groups, the Hispanic population, and other to Caution should also be used when comparing estimates for 1980 and later, (for education 1981 and later), which reflect 1960 census-based population controls to those for 1971 th 1979 (for education, to 1980), which reflect 1970 census-based population controls. This chair population controls had relatively little impact on derived measures such as means, mediant percent distribution, but did have a significant impact on levels. For example, use of 1980-population controls resulted in about a 2-percent increase in the civilian noinstitutional population the number of families and households. Thus, estimates of levels for 1980 and late differ from those for earlier years by more than what could be attributed to actual changes population and these differences could be disproportionately greater for subpopulation groups for the total population.

Population estimates and projections.—National population estimates are derived by using cennial census data as benchmarks and data available from various agencies as follows: Birth deaths (National Center for Health Statistics); immigrants (Immigration and Naturalization Se Armed Forces (Department of Defense and Department of Transportation) net movement be Puerto Rico and the U.S. mainland (Puerto Rico Planning Board); and Federal employees (Office of Personnel Management and Department of Defense). Estimates for States and a areas are based on data series such as births and deaths, school statistics from State depart of education and parochial school systems, and Federal income tax returns. These estimates tain estimated emigration of 160,000 per year since 1980 and net undocumented immigration, one Current Population Reports, series P-25, No.

The estimates of the components of change shown for intercensal periods for States in residual net migration plus the "error of closure," the unexplained difference between the est population at the end of the decade and the census count for that date. The error of closure national level was quite small during the 1950's (3,000) and 1980's (379,000). However, 1970's it amounts to almost 5 million.

National population projections indicate the approximate future level and characteristic population under given assumptions as to future fertility, mortality, and net immigration. The used to develop the projections involves preparation of projections of each of the compor population change—births, deaths, and net immigration—and the combination of these will estimates of the current population. Projections for States incorporate further assumption the redistribution of population as a consequence of internal migration.

Population estimates and projections are published in the P-25 and P-26 series of Curre lation Reports. These estimates and projections are generally consistent with official (census figures and do not reflect the amount of estimated census underenumeration.) I these estimates and projections by race have been modified and are not comparable to census race categories (see section below under "race"). For details on methodology, sources cited below the individual tables.

Immigration.—The principal source of immigration data is the Statistical Yearbook of the Immigration and Naturalization Service, published annually by the Immigration and Naturalization Service (INS), a unit of the Department of Juetice. Immigration statistics are prepared from entry visas and change of immigration status forms. The collection of U.S. Immigration statistics began under the Act of 1819. Data on persons arriving in ports were transmitted to the U.S. Secretary of State, who reported the information periodically to Congress. Subsequently, reports to the Secretary of State and to Congress were required by law, as well as the collection of data on immigrants arriving at land borders. Beginning in 1906, these arriving were divided into immigrants and nonimmigrants, depending on how long they intended to remain in the United States.

Immigrants are nonresident aliens (i.e., non U.S. citizens) admitted to the U.S. for permanent residence. The category includes persons who may have entered the U.S. as nonimmigrants or refugees, but who subsequently changed their status to that of a permanent resident. A large increase of immigrants admitted to the U.S. in one year may have been due to an influx of refugees one or two years earlier. Thus, immigrants as measured in tables 7 through 9 and 11 do not equal net civilian immigration as shown in table 6. Nonresident aliens admitted to the United States for a temporary period are nonimmigrants (see tables 392 and 393). Refugees are considered nonimmigrants when initially admitted into the U.S.

The Act of 1965, which became fully effective in July 1968, set up an annual numerical limitation of 170,000 immigrants from the Eastern Hemisphere, with no more than 20,000 immigrants to come from any one country, and a numerical limitation of 120,000 per year on Western Hemisphere immigration, which had previously been unrestricted. Western Hemisphere immigration, though restricted in total number, was not subject to preference category or per-country limitations. The 1965 Act thereby gave persons from every country within each hemisphere an equal chance to immigrants the United States. After 1968 immigrants were classified as these subject to numerical limitations of the Eastern Hemisphere and of the Western Hemisphere, and these exempt from numerical limitations (see table 9). These exempt include immediate relatives of U.S. citizens and various classes of special immigrants.

For immigrants subject to numerical limitations, numbers are allocated on a basis of six preference categories beginning in 1980 (previously 7 categories), four of which provide for reunion of families of U.S. citizens and resident aliens, and two for specified workers needed in the United States. Numbers not used by these six preferences are then available to qualified nonpreference immigrants. From 1968 to December 1976, preference classifications were applied only to immigrants from the Eastern Hemisphere. Beginning 1977, Western Hemisphere immigrants were also subject to preference and nonpreference classifications. Effective October 1978, the separate hemisphere limits were abolished in favor of a worldwide limit of 290,000. This limit was lowered to 280,000 for fiscal year 1980, and to 270,000 for fiscal year 1981 and subsequent years.

Effective November 1966, Cubans admitted or paroled (i.e., admitted without an immigration visa) into the United States after January 1, 1959, and present in the United States for at least 2 years, may obtain permanent resident status. A court decision in September 1976 exempted Cuban refuges from numerical limitations, retroactive to 1968. The Refugee Act of 1980 changed the residency requirement from two years to one year. Beginning in fiscal year 1985, INS began adjusting eligible Cuban entrants who were admitted to /kthe U.S. as part of the Mariel boat lift of 1980, which consisted of approximately 125,000 people.

Effective October 28, 1977, refugees from Vietnam, Laos, or Cambodia were eligible to apply for permanent resident status. Public Law 95-145 provided that Indochinese paroled into the United States after March 31, 1975, or physically present on that date, may become permanent residents after living for at least 2 years in the United States. This period was changed to one year under the Refugee Act of 1980. P.L. 95-145 expired on October 18, 1983. Indochinese refugees who entered the U.S. between March 1975 and April 1980 are eligible to adjust status under P.L. 95-412, the Act of October 5, 1978, which allows for the adjustment of refugee-parolees.

The Refugee Act of 1980, effective April 1, 1980, provides for a uniform admission procedure for refugees of all countries, based on the United Nation's definition of refugees. Authorized admission cellings are set annually by the President in consultation with Congress. After one year of residence in the United States, refugees are eligible for immigrant status.

Metropolitan Statistical Areas (MSA's), Consolidated Metropolitan Statistical Areas (CMSA's), and Primery Metropolitan Statistical Areas (PMSA's).—The general concept of an MSA is one of a large population nucleus together with adjacent communities which have a high degree of social and economic integration with that nucleus. CMSA's are large metropolitan complexes within which individual components, designated as PMSA's, have been defined. MSA's, CMSA's, and PMSA's are defined by the Office of Management and Budget as a standard for Federal agencies in the preparation and publication of statistics relating to metropolitan areas. The new terms MSA, CMSA, and PMSA went into effect June 30, 1983, replacing the previous terms SMSA (standard metropolitan statistical area) and SCSA (standard consolidated statistical area). The entire territory of the United States is classified as metropolitan (inside MSA's or CMSA's) or non-metropolitan (outside MSA's or CMSA's). MSA's, CMSA's, and PMSA's are defined in terms.

entire counties except in New England, where the definitions are in terms of cities and summarize data for New England that are available only by counties, New England Co. politan Areas (NECMA's) have been defined as a convenience for data users. From tir new metropolitan areas are created and the boundaries of others change. As a resu metropolitan areas over time may not be comparable and the analysis of historical trend made cautiously. For descriptive details, tables showing changes in metropolitan area and a listing of area titles and components of each metropolitan area, see Appendix II.

Urban and rural.—According to the 1980 census definition, the urban population co persons living in (a) places of 2,500 or more inhabitants incorporated as cities, villages (except in Alaska and New York), and towns (except in the New England States, New Wisconsin), but excluding those persons living in the rural portions of extended cities ( low population density in one or more large parts of their area); (b) census designated r viously termed unincorporated) of 2,500 or more inhabitants; and (c) other territory, inco unincorporated, included in urbanized areas. An urbanized area consists of a central cit tral core, together with contiguous closely settled territory, that combined have a total po at least 50,000.

In censuses prior to 1950, the urban population comprised all persons living in ir places of 2,500 or more inhabitants and areas (usually minor civil divisions) classifier under special rules relating to population size and density. To improve its measure of population, the Bureau of the Census in 1950 adopted the concept of the urbanized area eated boundaries for unincorporated places. The 1950 definition has continued subst changed, except for minor modifications in 1980, the introduction of the extended city 1970, and changes in the criteria for defining urbanized areas for 1980 so as to permit to be defined around smaller centers. In all definitions, the population not classified as stitutes the rural population.

Residence.-In determining residence, the Bureau of the Census counts each perso habitant of a usual place of residence (i.e., the place where one usually eats and sleeps) place is not necessarily a person's legal residence or voting residence, the use of the bases of classification would produce the same results in the vast majority of cases.

Race.—In the 1980 census, 15 groups were listed in the race item on the 1980 censu naire: White, Black, American Indian, Eskimo, Aleut, Chinese, Filipino, Japanese, At Korean, Vietnamese, Hawaiian, Samoan, Guamanian, and Other, The concept of race the Census Bureau does not denote any clear-cut scientific definition of biological stock 1980 census obtained information on race through self-identification by respondents, th resent self- classification by people according to the race with which they identify.

In 1980, if persons of mixed racial parentage could not provide a single response t question, the race of the person's mother was used; however, if a single response or provided for the mother, then the first race reported by the person was used. This is a r of the 1970 census procedure in which the race of the person's father was used.

The 1980 population totals for "White" and "Other" are not comparable with correct ures from previous censuses. The lack of comparability is due to changes in the we spondents reported their race as well as changes in 1980 census procedures related \$ classification. (For a fuller explanation, see 1980 Census of Population, Volume I, Gene tion Characteristics (PC80-1-B).)

Estimates of the population by race for April 1, 1980 (shown in tables 17 and 20) a counts and are not comparable to the 1980 census race categories. These estimates we ed using 1980 census data by race which had been modified to be consistent with the ra ries used in the reporting of vital statistics by the U.S. National Center for Health Statis tailed explanation of the race modification procedure appears in Current Population Rep P- 25, No. 917.

In the Current Population Survey (CPS) and other household sample surveys in white obtained through personal interview, respondents are asked to classify their race as 1 Black, 3) American Indian, Aleut, or Eskimo, or 4) Asian or Pacific Islander. The pro classifying persons of mixed races who could not provide a single response to the rat are generally similar to those used in the 1980 census. For comments on comperable CPS and census data, see section above on Current Population Survey.

Hispanic population.—In the 1980 census, the Bureau of the Census collected d Spanish origin population in the United States by using a self-identification question. Spanish/Hispanic origin or descent are those who classified themselves in one of the t panic origin categories listed on the questionnaire—Mexican, Puerto Rican, Cuban, or 🕻 ish/Hispanic origin. The 1980 figures on Spanish origin are not directly comparable census data on Spanish origin because of factors such as overall improvements ti census and improved question design. Also, it should be noted that Hispanic persons any race.

Ы

In the Current Population Survey (CPS), information on Hispanic persons was gathered by using a self-identification question. Persons classified themselves in one of the Hispanic categories in response to the question. "What is the origin or descent of each person in this household?" Hispanic persons in the CPS were persons who reported themselves as Mexican-American, Chicano, Mexican, Puerto Rican, Cuban, Central or South American, or other Hispanic origin.

**Mativity.**—The native population consists of all persons born in the U.S., Puerto Rico, or an outlying area of the U.S. It also includes persons born at sea or in a foreign country who have at least one American parent. All others are classified as "foreign born."

Mobility status.—The U.S. population is classified according to mobility status on the basis of a comparison between the place of residence of each individual at the time of the survey or census and the place of residence at a specified earlier data. Nonmovers are all persons who were living in the same house or apartment at the end of the period as at the beginning of the period. Movers are all persons who were living in a different house at the and of the period from that in which they were living at the beginning of the period. Movers from abroad include all persons, either citizens or aliens, whose place of residence was outside the U.S. at the beginning of the period: that is, in Puerto Rico, an outlying area under the jurisdiction of the U.S., or a foreign country.

Living arrangements.—Living arrangements may be in households or in group quarters. A "household" comprises all persons who occupy a "housing unit," that is, a house, an apartment or other group of rooms, or a single room that constitutes "separate living quarters." A household includes the related family members and all the unrelated persons, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone or a group of unrelated persons sharing the same housing unit as partners is also counted as a household. See text, section 26, Construction and Housing, for definition of "housing unit."

All persons not living in households are classified as living in group quarters. These individuals may be institutionalized, e.g., under care or custody in juvenile facilities, jails, correctional centers, hospitals, or rest homes; or they may be residents in college dormitories, military barracks, rooming houses, etc. (see table 74).

Householder.—Beginning in 1980, the terms "householder" and "family householder" have been used in the presentation of data that had previously been presented with the designations "head of household" and "head of family". The householder is the first adult household member listed on the questionnaire. The instructions call for listing first the person (or one of the persons) in whose name the home is owned or rented. If a home is owned or rented jointly by a married couple, either the husband or the wife may be listed first. Prior to 1980, the husband was always considered the household head (householder) in married-couple households.

Family.—The term "family" refers to a group of two or more persons related by birth, marriage, or adoption and residing together in a household. A family includes among its members the householder.

Subfamily.—Subfamilies are divided into "related" and "unrelated" subfamilies. A related subfamily consists of a married couple and their children, if any, or one parent with one or more never married children under 18 years old living in a household and related to, but not including, the householder. Members of a related subfamily are also members of the family with whom they live. The number of related subfamilies, therefore, is not included in the number of families. An unrelated subfamily comprises two or more persons such as guests, lodgers, or resident employees who are related to each other but not to householder.

Married couple.—A "married couple" is defined as a husband and wife living together in the same household, with or without children and other relatives.

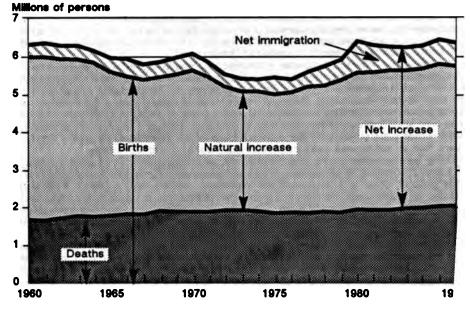

Unrelated individuals.—"Unrelated individuals" refers to persons (other than inmates of institutions) who are not living with any relatives. An unrelated individual may be a nonfamily householder who lives alone or with nonrelatives only, or a secondary individual such as a guest, lodger, or resident employee who is not related to any other persons in the household. Persons in group quarters, except inmates of institutions, are classified as secondary individuals.

Statistical reliability.—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to Historical Statistics of the United States, Colonial Times to 1970. See Appendix IV.

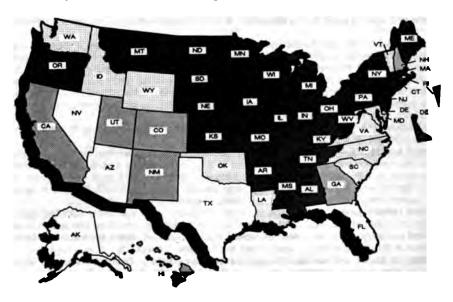

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and MSAs may also be found in State and Metropolitan Area Data Book 1986. For cross-references, see Appendix V.

#### No. 1. POPULATION AND AREA: 1790 TO 1980

[Area figures represent area on indicated date including in some cases considerable areas not then organized or settled, and not covered by the census. Total area figures for 1790-1970 have been recalculated on the basis of the remeasurement of States and counties for the 1990 census. The land and water area figures for past censuses have not been adjusted and are not strictly comparable with the total area date for comparable dates because the land areas were derived from different base data, and these values are known to have changed with the construction of reservoirs, delning of lakes, etc. Density figures are based on land area measurements as reported in earlier consuses. For additional area data, see tables 3 and 319]

#### No. 15. Projections of the Hispanic Population by Age and Sex: 1987 to 2000

[As of July 1, Includes Armed Forces overseas. See text, section 1 for explanation of methodology. Data are for the middle with the following assumptions about fertility (ultimate lifetime births per woman), mortality (life expectancy in 2006 immigration (yearly net immigration): 1.9 births per woman, 81.0 years, and 143,000 net immigration. These projections a consistent with those shown in tables 14 and 16]

NA Not available. <sup>1</sup> Beginning 1980, current definition. For explanation of change, see text, section 1. <sup>2</sup> Excludes Alex and Hawali. <sup>2</sup> The revised 1970 resident population count to 203,302,031; which incorporates changes due to errors found at tabulations were completed. The race and sex data shown here reflect the official 1970 census count while the residence come from the tabulated count; see text, section 1. <sup>4</sup> The race data shown for April 1, 1980 have been modified; see text.

## No. 34. METROPOLITAN STATISTICAL AREAS—POPULATION, 1970 TO 1986, AND SELECTED CHARACTERISTICS, 980

[1979 and 1998, as of April 1; 1985 and 1996 as of July 1. Covers 20 consolidated metropolitan statistical areas (CMSAs), their 71 component primary metropolitan statistical areas (PMSAs), and the remaining 111 MSA's with 250,000 and over population as defined by the U.S. Office of Management and Budget as of June 30, 1987. Figures for 1970 include corrections. Rank based on unrounded figures for CMSAs and MSAs only. For definitions and components of all MSAs, see Appendix II. For explanation of average annual percent change, see Guide to Tabular Presentation. Minus sign (—) indicates decrease]

### No. 57. Households, by Type-Projections: 1988 to 2000

a. As of July. Series A reflects the assumption that the recent moderation in marriage and divorce trends will continue torical changes spanning the last 25 years must be taken into consideration. Series A assumes a continuation of past suseholder proportions but changes in recent years are given more weight. Series Reflects assumptions intermediate intes A and C, namely changes in marriage and divorce will slow considerably, but will not cease during the next 15 as C reflects the assumption that the rapid change in marriage and divorce may have come to an end, and if proportions will remain constant for the next 15 years]

### **Population**

### No. 69. CHILDREN UNDER 18 YEARS OLD, BY PRESENCE OF PARENTS: 1970 TO 1986

[As of March. Excludes persons under 18 years old who maintained households or family groups. It is likely that most of sizeable increase in children living with never merited mothers is the result of new and more definitive coding proceds introduced by the Census Bureau in 1982. Based on Current Population Survey; see headnote, table 86]

### No. 77. RELIGIOUS BODIES-SELECTED DATA

its latest information available from religious bodies with memberships of 50,000 or more; excludes a few groups giving. Not all groups follow same calendar year nor count membership in same way, same groups give only approximate Roman Catholics count all baptized persons, including infants; Jewish statistics are estimates of the number of persons Jewish households including as a consequence of intermembrap, approximately 7.4 percent non-Jewish persons, Eastern K. Churches Include all persons in their nationality or cultural groups; most Protestant bodies count only persons who latend full membership, and previous estimates have indicated that all but a small mining of these are over 13 years of sever, many Lutheran bodies and The Episcopal Church report all baptized persons, and not only these confirmed. Data peer in latios are "noncurrent," i.e., they are reported for 1994 or eartier. All other data are "current" and were I in 1999 or 1995]

### Section 2

### **Vital Statistics**

his section presents vital statistics—data on births; deaths; abortions; fetal deaths, including sirths; fertility; life expectancy; marriages; and divorces. Vital statistics are compiled for the ntry as a whole by the National Center for Health Statistics (NCHS) and published in its annual art, Vital Statistics of the United States, in certain reports of the Vital and Health Statistics as, and in the Monthly Vital Statistics Report. Reports in this field are also issued by the various is bureaus of vital statistics. Data on fertility, on age of persons at first marriage, and on marital us and marital history are compiled by the Bureau of the Census from its Current Population rey (CPS; see text, section 1) and published in Current Population Reports, series P-20. Data on ritions are published by the Alan Guttmacher Institute, New York, NY in selected issues of ally Planning Perspectives and by the U.S. Centers for Disease Control in the annual Abortion reliance Report—Legal Abortions.

egistration of vital events.—The registration of births, deaths, fetal deaths, and other vital nts in the United States is primarily a State and local function. The civil laws of every State ride for a continuous and permanent birth- and death-registration system. Many States also profor marriage- and divorce-registration systems. Vital events occurring to U.S. residents outside United States are not included in the data.

Irths and deaths.—The live-birth, death, and fetal- death statistics prepared by NCHS are ad on copies of vital records received from registration offices of all States, of New York City, of the District of Columbia. The annual collection of death statistics on a national basis began 900 with a national death-registration area of 10 States and the District of Columbia; a similar ual collection of birth statistics for a national birth-registration area began in 1915, also with 10 arting States and the District of Columbia. Since 1933, the birth- and death-registration areas a comprised the entire United States, including Alaska (beginning 1959) and Hawaii (beginning 0). National statistics on fetal deaths were first compiled for 1918 and annually since 1922.

rior to 1951, birth statistics came from a complete count of records received in the Public lith Service (now received in NCHS). From 1951 through 1971, they were based on a 50-pert sample of all registered births (except for a complete count in 1955 and a 20- to 50-percent spie in 1967). Beginning in 1972, they have been based on a complete count for States in the sperative Health Statistics System (for details, see the technical appendix in Vital Statistics of United States) and on a 50-percent sample of all other areas. Mortality data have been based a complete count of records for each area (except for a 50-percent sample in 1972). Beginning 970, births to, and deaths of nonresident aliens of the United States and U.S. citizens outside United States have been excluded from the data. Fetal deaths and deaths among Armed ces abroad are excluded. Data based on samples are subject to sampling error; for details, see usel issues of Vital Statistics of the United States.

lortality statistics by cause of death are compiled in accordance with World Health Organization ulations according to the International Classification of Diseases (ICD). The ICD is revised applications according to the ICD was employed beginning in 1979. Deaths prior years were classified according to the revision of the ICD in use at the time. Each revision he ICD introduces a number of discontinuities in mortality statistics; for a discussion of those ween the eighth and ninth revisions of the ICD, see Monthly Vital Statistics Report, vol. 28, No. supplement.

ome of the tables present age-adjusted death rates in addition to crude death rates. Age adjustdeath rates shown in this section were prepared using the direct method, in which age-specific th rates for a population of interest are applied to a standard population distributed by age. Age astment eliminates the differences in observed rates between points in time or among compared ulation groups that result from age differences in population composition.

sportions.—The U.S. Centers for Disease Control (CDC) collects data on abortions annually n States which have a central health agency with a statewide reporting system. The Alan Gutt-

macher Institute, New York, NY also issues data on the number of abortions based on its own surveys of hospitals and physicians. The Guttmacher Institute also publishes data on the characteristics of abortions after adjusting CDC data for changes in the number of States reporting each year.

Fertility and life expectancy.—The total fertility rate, defined as the number of births that 1,000 women would have in their lifetime if, at each year of age, they experienced the birth rates occurring in the specified year, is compiled and published by NCHS. Other data relating to social and medical factors which affect fertility rates, such as contraceptive use and birth expectations, are collected and made available by both NCHS and the Bureau of the Census. NCHS figures are based on information in birth and fetal death certificates and on the periodic National Surveys of Family Growth; Bureau of the Census data are based on decennial censuses and the CPS.

Data on life expectancy, the average remaining lifetime in years for persons who attain a given age, are computed and published by NCHS. For details, see the technical appendix in *Vital Statistics of the United States*.

Marriage and divorce.—The compilation of nationwide statistics on marriages and divorces in the United States began in 1887-1888 when the National Office of Vital Statistics prepared estimates for the years 1887-1888. Although periodic updates took place after 1888, marriage and divorce statistics were not collected and published annually until 1944 by that Office. In 1957 and 1958, respectively, the same Office established marriage- and divorce-registration areas. Beginning in 1957, the marriage-registration area comprised 30 States, plus Alaska, Hawaii, Puerto Rico, and the Virgin Islands; it currently includes 42 States and the District of Columbia. The divorce- registration area, starting in 1958 with 14 States, Alaska, Hawaii, and the Virgin Islands, currently includes a total of 31 States and the Virgin Islands. Procedures for estimating the number of marriages and divorces in the registration States are discussed in Vital Statistics of the United States, Vol. III—Marriage and Divorce. Total counts of events for registration and nonregistration States are gathered by collecting already summarized data on marriages and divorces reported by State offices of vital statistics and by county offices of registration.

Another important source of data on marriage and divorce trends in the United States is the March supplement to the Current Population Survey conducted by the Bureau of the Census. For information on marital status, see section 1.

Vital statistics rates.—Except as noted, vital statistics rates computed by NCHS are based on decennial census population figures as of April 1 for 1940, 1950, 1960, 1970, and 1980; and on midyear population figures for other years, as estimated by the Bureau of the Census (see text, section 1).

Race.—Data by race for births, deaths, marriages, and divorces from NCHS are based on information contained in the certificates of registration. The Census Bureau's Current Population Survey obtains information on race by asking respondents to classify their race as 1) White, 2) Black, 3 American Indian, Eskimo, or Aleut, or 4) Asian or Pacific Islander.

Statistical reliability.—For discussion of statistical collection, estimation, and sampling procedures, and measures of statistical reliability applicable to Census Bureau and NCHS data, see Appendix III.

Historical statistics.—Tabular headnotes provide cross- references, where applicable, to *Histor* cal Statistics of the United States, Colonial Times to 1970. See Appendix IV.

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and MSA may also be found in *State and Metropolitan Area Data Book 1986*. For cross-references, see Appendix V.

### No. 81. LIVE BIRTHS, DEATHS, MARRIAGES, AND DIVORCES: 1910 TO 1986

 excludes Alaska and Hewall. Figures for deaths and death rates for 1910-1830 are for death-registration States sing 1970, excludes births to, and deaths of, nonresidents of the U.S. See Appendix III. See also Historical Statistics, lines to 1970, series B 1-5, B 142, B 167, B 214, and B 216.

sealable. <sup>1</sup> Through 1957, adjusted for underregistration. <sup>2</sup> Infants under 1 year, excluding fetal deaths; rates gistered live births. <sup>2</sup> includes estimates for some States through 1889 and also for 1976 and 1977 and marriage some States for all years except 1973 and 1975. Beginning 1978, includes nonlicensed marriages in California reported annulments and some estimated State figures for all years. <sup>3</sup> Prefilminary.

### 82. TOTAL FERTILITY RATE AND INTRINSIC RATE OF NATURAL INCREASE: 1940 TO 1985

asks prior to 1959 and Hewaii prior to 1990. Prior to 1990, based on births adjusted for underregistration; thereefler, births only. Beginning 1970, excludes births to nonresidents of United States. The *total fertility rate* is the number of 1,000 women would have in their litetime if, at each year of age, they experienced the birth rates occurring in the ear. A total fertility rate of 2,110 represents "replacement level" fertility for the total population under current mortality (assuming no not immigration). The *intrinsic rate of natural increase* is the rate that would eventually prevail if a were to experience, at each year of age, the birth rates and death rates occurring in the specified year and if those aired unchanged over a long period of time. Minus sign (—) indicates decrease. See also Appendix III, and Historical Colonial Times to 1970, series B 11]

es births to nonresidents. 

Provisional. 

Besed on population (excluding Armed Forces abroad) enumerated as of 1970 and 1980, and estimated as of July 1 for other years.

1.3. totals are based on monthly receipts corrected for differences between provisional and final monthly figures. State figures have not been corrected in this manner.

U.S. National Center for Health Statistics, Vital Statistics of the United States, annual; and Monthly Vital Statistics

### No. 86. LIVE BIRTHS BY RACE AND TYPE OF HISPANIC ORIGIN—SELECTED CHARACTERISTICS: 1985

[Represents registered births. Excludes births to nonresidents of the U.S. Data are available on race of mother from all States, but data on Hispanic origin of mother are available from only 23 States and the District of Columbia. However, approximately 90 percent of all births to Hispanic mothers occur to residents of these 23 States. See Appendix III]

#### No. 87. BIRTHS TO UNMARRIED WOMEN, BY RACE AND AGE OF MOTHER: 1960 TO 1965

[Beginning 1970, excludes births to nonresidents of U.S. Data for 1960-79 include estimates for States in which marital status data were not reported. Beginning in 1960, marital status is inferred from a comparison of the child's and parents' surnames on the birth certificate for those States that do not report on marital status. No estimates included for miestatements on birth records or failures to register births. See also Appendix III and Historical Statistics, Colonial Times to 1970, series B 28-35]

### M. SOCIAL AND ECONOMIC CHARACTERISTICS OF WOMEN, 18-44 YEARS OLD, WHO HAVE HAD A CHILD IN THE LAST YEAR: 1986

Jame. Covers of the noninstitutional population. Since the number of women who had a birth during the 12-month period tabulated and not the actual numbers of births, some small undersettmetion of fertility for this period may exist due to the aton of: (1) Multiple births, (2) Two or more live births spaced within the 12-month period (the women is counted only once), from who had births in the period and who did not survive to the survey data, (4) Women who were in institutions and store not in the survey universe. These losses may be somewhat offset by the inclusion in the CPS of births to immigrants did not have their children form in the United States and births to nonresident women. These births would not have been rided in the vital registration system. Based on Current Population Survey (CPS); see text, section 1 and Appendix III]

seents deaths of infants under 1 year old, exclusive of fetal deaths.

100,000 live births from deliveries and complications of pregnancy, childbirth, and the puerperium. Beginning 1979 deaths silled according to the initrit nevision of the Infantational Classification of Diseases; for the earlier years classified according vision in use at the time; see text, section 2.

naing 1970, includes only those deaths with stated or presumed period of gestation of 20 weeks or more; for prior years, gestational age not stated.

4 Represents deaths of infants under 26 days old, exclusive of fetal deaths.

x: U.S. National Center for Health Statistics, Vital Statistics of the United States, annual; and unpublished data.

#### O. 114. FETAL AND INFANT DEATHS-NUMBER AND PERCENT DISTRIBUTION: 1960 TO 1985

iguirements for reporting of fetal deaths vary. Most States require reporting of fetal deaths of gestations of 20 weeks or There is substantial evidence that not all fetal deaths for which reporting is required are reported. For details of dology, see Appendix III and source)

#### 17. DEATH RATES, 1960 TO 1985, AND DEATHS, 1970 TO 1985, FROM SELECTED CAUSES

1970, excludes deaths of nonresidents of the U.S. For explanation of age-adjustment, see text, section 2. The standard in for this table is the total population of the United States enumerated in 1940. Beginning 1979, deaths classified to ninth revision of International Classification of Diseases; for earlier years, classified according to revision in use at See also Appendix III and Historical Statistics, Colonial Times to 1970, series B149-166]

NO. 121. DEATH RATES FROM HEART DISEASE, BY SEX, AGE, AND SELECTED TYPE: 1960 TO 1985

Deaths per 100,000 population in specified age groups. Beginning 1970, excludes deaths of nonresidents of the United States. Beginning 1979, deaths classified according to the ninth revision of the International Classification of Diseases. For earlier years, classified according to the revision in use at the time; see text, section 2. See Appendix III]

#### Section 3

### **Health and Nutrition**

This section presents statistics on health expenditures and insurance coverage; medical personnel; hospitals; nursing homes and other care facilities; incidence of acute and prevalence of chronic conditions; nutritional intake of the population; and per capita food consumption. Summary statistics showing recent trends on health care and discussions of selected health issues are published annually by the U.S. National Center for Health Statistics (NCHS) in Health, United States. Data on national health expenditures, medical costs, and insurance coverage are compiled by the U.S. Health Care Financing Administration (HCFA), and appear in the quarterly Health Care Financing Review, Health Care Financing Notes, (no longer being produced) and in the Annual Medicare Program Statistics series. Statistics on health facilities are collected by NCHS and are published in series 14 of Vital and Health Statistics. Statistics on hospitals are published annually by the American Hospital Association, Chicago, IL, in Hospital Statistics. Primary sources for data on nutrition are the quarterly National Food Review and the annual Food Consumption, Prices, and Expenditures, both issued by the U.S.Depertment of Agriculture. In addition, NCHS conducts periodic surveys of nutrient levels in the population and clinical signs of malnutrition.

National health expenditures.—The HCFA compiles estimates of national health expenditures (NHE) to measure spending for health care in the U.S. The NHE accounts are structured to show spending by type of expenditure (i.e., hospital care, physician care, dental care, other professional care, drugs and medical sundries, medical durable equipment, nursing home care and other personal health expenditures, plus non-personal health expenditures for such items as public health, research, construction of medical facilities, and administration) and by source of funding (e.g., private health insurance, direct payments, and a range of public programs including Medicare, Medicaid and Veterans Administration (VA)).

In all cases except private insurance (HCFA conducts its own survey of part of the health insurance industry), data used to estimate health expenditures come from existing sources which are tabulated for other purposes. The type of expenditure estimates rely upon statistics produced by such groups as the American Hospital Association, the Internal Revenue Service, the Department of Commerce, and the Department of Health and Human Services (HHS). Source of funding estimates are constructed using administrative and statistical records from: the Medicare and Medicaid programs, the Department of Defense and VA medical programs, the Social Security Administration, Census Bureau's Governmental Finances, State and local governments, other HHS agencies, and other nongovernment sources. Detailed descriptions of sources and methods, along with the most recent analysis of health care expenditure estimates, are published in the Health Care Financing Review's annual article on national health expenditures.

Health resources.—Hospital statistics based on data from the American Hospital Association's yearly survey are published annually in *Hospital Statistics*, and cover all hospitals accepted for registration by the Association. To be accepted for registration, a hospital must meet certain requirements relating to number of beds, construction, equipment, medical and nursing staff, patient care, clinical records, surgical and obstetrical facilities, diagnostic and treatment facilities, laboratory services, etc. Data obtained from NCHS cover all U.S. hospitals which meet certain criteria for inclusion. The criteria are published in *Vital and Health Statistics* reports, series 14. In these reports, a hospital is defined as a facility with at least six inpatient beds that is licensed as a hospital by a State, or is operated as a hospital by a Federal or State agency.

Statistics on the demographic characteristics of persons employed in the health occupations are based on data compiled by the U.S. Bureau of Labor Statistics and reported in *Employment and Earnings* (monthly) (see table 627, section 13). Data based on sample surveys of health personnel and utilization of health facilities providing long-term care, ambulatory care, and hospital care are presented in NCHS series 13 and series 14, *Health Resources Utilization Data* and *Manpower and Facilities Data*. Statistics on patient visits to health care providers, as reported in health interviews, appear in NCHS series 10, *National Health Interview Survey Data*.

The HCFA's Health Care Financing Review, Health Care Financing Program Statistics and No series present data for hospitals and nursing homes as well as extended care facilities and ho health agencies. These data are based on records of the Medicare program and differ from the of other sources because they are limited to facilities meeting Federal eligibility standards for puticipation in Medicare.

Data on patients in hospitals for the mentally ill and on mental health facilities are collected the National Institute of Mental Health (NIMH) and appear in *Mental Health*, *U.S.*, the *Mental Health Statistics* reports, (series CN), and the Mental Health Statistical Note series.

Disability and illness.—General health statistics, including morbidity, disability, injuries, prev tive care, and findings from physiological testing, are collected by NCHS in its National Health Irr view Survey and its National Health and Nutrition Examination Surveys and appear in Vital in Health Statistics, series 10 and 11, respectively. The Department of Labor compiles statistics industrial injuries (see Section 13). Annual incidence data on notifiable diseases are compiled the Public Health Service (PHS) at its Centers for Disease Control in Atlanta, Georgia, and are plished as a supplement to its Morbidity and Mortality Weekly Report. The list of diseases is revit annually and includes those which, by mutual agreement of the States and PHS, are communics diseases of national importance.

Nutrition.—Statistics on annual per capita consumption of food and its nutrient value are a mated by the U.S. Department of Agriculture and published quarterly in National Food Review. I torical data can be found in Food Consumption, Prices, and Expenditures, issued annually.

Statistical reliability.—For discussion of statistical collection, estimation, and sampling produces and measures of statistical reliability applicable to data from NCHS and HCFA, see Apper III

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to Historical Statistics of the United States, Colonial Times to 1970. See Appendix IV.

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and Mt may also be found in *State and Metropolitan Area Data Book 1986*. For cross-references, see pendix V.

### NO. 142. HEALTH MAINTENANCE ORGANIZATIONS (HMO).—NUMBER AND ENROLLMENT, BY TYPE AND SIZE OF ORGANIZATION: 1976 TO 1986

[As of June 30, except as noted. Under the Health Maintenance Organization Act, an HMO must have four characteristics: (1) an organized system for providing health care in a geographic area, for which the HMO is responsible for providing or otherwise assuring its delivery; (2) an agreed upon set of basic and supplemental health maintenance and treatment services; (3) a voluntarily enrolled group of people; and (4) community rating. A group HBIO contracts with one or more medical groups to provide services to members and generally provides all services except hospital care under one roof. Data for group model HMOs include staff model HMOs (at model in which the HMO hines its own physicians) and network HMOs entracts with aphysician organization that in turn contracts with individual physician organization that in turn contracts with individual physicians provide care to HMO members from their private offices and continue to see their fee-for-service patients]

NA Not available. ¹ Covers rursing homes with 3 bads or more and all other places providing some form of nursing personal, or domiciliary care; standards vary widely among States. Includes skilled nursing facilities. 1971–1985 based on National Master Facility Inventory. Some changes in data beginning 1976 may be due to dependence on State collection. 1985 data based on the 1986 inventory of Long-Term Care Places. Data may not be strictly comparable with previous year data. ² includes 1978 data for California, District of Columbia, New York, and North Carolina. ² Excludes hospital-based nursing homes and includes 1978 data for Alaska and South Dakota. ⁴ Excludes hospital-based nursing homes. ⁴ Source: Through 1976, U.S. Social Security Administration, Health Insurance Statistics and unpublished data. Beginning 1978, U.S. Health Care Financing Administration, Medicare Participating Providers and Suppliers of Health Services, 1990; and unpublished data. Covers tacilities and bade certified for participating under Medicare as of mid-year. Includes facilities which have transfer agreements with one or more participating hospitals, and are engaged primarily in providing skilled nursing care and related services for the rehabilitation injured, disabled, or sick persons. ⁴ Based on number of aged persons residing in United States who were enrolled in the Medicare hospital insurance program as of July 1 of year stated.

1 includes residential treatment centers for emotionally disturbed children.
2 Non-Federal hospitals with separate psychiatric services.
3 includes Veterans Administration (VA) neuropsychiatric hospitals, VA general hospitals with separate psychiatric settings and VA freestanding psychiatric outpatient clinics.
4 Federally funded.
3 Other multiservice mental health scillibes with an inpatient setting which are not elsewhere classified. Number of facilities, expenditures, and staff data also include freestanding psychiatric day/night facilities.
9 1978 dats.
7 As of February 1981.
3 As a result of the shift in funding of the community mental health center (CMHC) program from categorical to block grants, the category CMHC was dropped in 1981. Organizations which had been classified as federally funded CMHC in previous years were reclassified as multiservice mental health organizations, freestanding psychiatric outpatient clinics, or as psychiatric units of non-Federal general hospitals, depending on the types of services they directly operated and controlled.
9 For prior years an organization had to have either inputent or residential treatment services in combination to two or more settings (e.g. outpatient plus partial care, residential treatment puts outpatient plus partial care; and in enither a hospital nor a residential treatment center for emotionally disturbed children is classified as a multiservice mental health organizations.

## No. 176. CANCER—ESTIMATED NEW CASES, 1986, AND SURVIVAL RATES, 1974-1976 AND 1977-1983

[Five-year survival rates represent the number of persons who live at least five years after a disease is diagnosed per 100 persons diagnosed with the disease in a given time period. Survival data shown are based on those patients diagnosed while residents of an area listed below during the time periods shown. Data are based on information collected as part of the National Canoer Institute's Surveillance. Epidemiology and End Results (SEER) program, a collection of population-based registries in Connecticut, New Mexico, Utah, Iowa, Hawali, Atlanta, Detroit, Seattle-Puget Sound, and San Francisco-Oaldand]

# No. 187. Nutrition—Nutrients in Foods Available for Civilian Consumption per Capita per Day and Indexes: 1960 to 1965

[Computed by Human Nutrition Information Service (HNIS), USDA. Based on estimates of per capita food consumption (retail weight) by the Economic Research Service (ERS), on Imputed consumption data for foods no longer reported by ERS, and on HNIS estimates of quantities of produce from home gereiens. No deduction is made in food supply estimates for loss of food or nutrients in further processing, in marketing, or in the home. Data include iron, thiemin, riboflavin, niscin, vitamin A., vitamin B., vitamin B., and secondic acid added by enrichment and fortification. Minus sign (—) indicates decrease. See Historical Statistics, Colonial Times to 1970, series G 851-855 for related details)

### Section 4

### **Education**

This section presents data primarily concerning formal education as a whole, at various levels, and for public and private schools. Data shown relate to the school-age population and school enrollment, educational attainment, education personnel, and financial aspects of education. In addition, data are shown for libraries, computer usage in schools, and adult education. The chief sources are the decennial census of population and the Current Population Survey (CPS), both conducted by the Bureau of the Census (see text, section 1); annual, biennial, and other periodic surveys conducted by the Center for Education Statistics (formerly known as the National Center for Education Statistics), a part of the U.S. Department of Education; and surveys conducted by the National Education Association.

The censuses of population have included data on school enrollment since 1840 and on educational attainment since 1940. The CPS has reported on school enrollment annually since 1945 and on educational attainment periodically since 1947.

The Center for Education Statistics is continuing the pattern of statistical studies and surveys conducted by the U.S. Office of Education since 1870. The annual Digest of Education Statistics provides summary data on pupils, staff, finances, including government expenditures, and organization at the elementary, secondary, and higher education levels. It is also a primary source for dealled information on Federal funds for education, projections of enrollment, graduates, and teachirs. The Condition of Education, issued annually, presents a summary of information on education of particular interest to policymakers.

Other sources of data include special studies by the Center for Education Statistics, and annual in blennial reports of education agencies in individual States. The census of governments, conducted by the Bureau of the Census every 5 years (for the years ending in "2" and "7"), provides data in school district finances and State and local government expenditures for education. Reports sublished by the Bureau of Labor Statistics contain data relating employment experience to educational attainment.

Types and sources of data.—The statistics in this section are of two general types. One type, assemplified by data from the Bureau of the Census, is based on direct interviews with individuals to abtain information about their own and their family members' education. Data of this type relate to inchool enrollment and level of education attained, classified by age, sex, and other characteristics of the population. The school enrollment statistics reflect attendance or enrollment in any regular school within a given period; educational attainment statistics reflect the highest grade completed by an individual.

For enrollment data starting in October 1981, the CPS used 1980 census population controls; for sears 1971 through 1980, 1970 census population controls had been used. This change had little mpact on summary measures (e.g., medians) and proportional measures (e.g., enrollment rates); sowever, use of the controls may have significant impact on absolute numbers. Where appropriate or comparability purposes, 1981 data have been provided in two ways—once based on 1970 conrols, and once based on 1980 controls; see, for example, table 194.

The second type, generally exemplified by data from the Center for Education Statistics and the **tational** Education Association, is based on reports from administrators of educational institutions and of State and local agencies having jurisdiction over education. Data of this type relate to enrollment, attendance, staff, and finances for the Nation, individual States, and local areas.

Unlike the Center for Education Statistics, the Census Bureau does not regularly include specialzed vocational, trade, business, or correspondence schools in its surveys. The Center for Educaion Statistics includes nursery schools and kindergartens that are part of regular grade schools in heir enrollment figures. The Census Bureau includes all nursery schools and kindergartens. At the tigher education level, the statistics of both agencies are concerned with institutions granting degrees or offering work acceptable for degree-credit, such as junior colleges.

**School attendance.**—All States require that children attend school. While State laws vary as to the ages and circumstances of compulsory attendance, generally they require that formal schooling begin by age 6 and continue to age 16.

118 Education

Schools.—The Center for Education Statistics defines a school as "a division of the school system consisting of students composing one or more grade groups or other identifiable groups, organized as one unit with one or more teachers to give instruction of a defined type, and housed in a school plant of one or more buildings. More than one school may be housed in one school plant, as is the case when the elementary and secondary programs are housed in the same school plant."

Regular schools are those which advance a person toward a diploma or degree. They include public and private nursery schools, kindergartens, graded schools, colleges, universities, and professional schools. Public schools are schools controlled and supported by local, State, or Federal governmental agencies; private schools are those controlled and supported mainly by religious organizations or by private persons or organizations.

The Bureau of the Census defines elementary schools as including grades 1 through 8; high schools as including grades 9 through 12; and colleges as including junior or community colleges, regular 4-year colleges, and universities and graduate or professional schools. Statistics reported by the Center for Education Statistics and the National Education Association by type of organization, such as elementary level and secondary level, may not be strictly comparable with those from the Bureau of the Census because the grades included at the two levels vary, depending on the level assigned to the middle or junior high school by the local school systems.

School year.—Except as otherwise indicated in the tables, data refer to the school year which, for elementary and secondary schools, generally begins in September of the preceding year and ends in June of the year stated. For the most part, statistics concerning school finances are for a 12-month penod, usually July 1 to June 30. Enrollment data generally refer to a specific point in time, such as fall, as indicated in the tables.

Statistical reliability.—For a discussion of statistical collection, estimation, and sampling procedures and measures of statistical reliability applicable to Census Bureau and the Center for Education Statistics data, see Appendix III.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to Historical Statistics of the United States, Colonial Times to 1970. See Appendix IV.

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and MSAs may also be found in *State and Metropolitan Area Data Book 1986*. For cross-references, see Appendix V.

Not available. 

1 Candidates with 1 year or less of full-time nonmilitary employment.

2 For master's degree, offers are ortachnical undergraduate degree.

4 Includes computer engineering.

addes engineering physics.

4 Excludes economics.

### No. 254. EARNED DEGREES CONFERRED, BY LEVEL OF DEGREE: 1950 TO 1985

n thousands, except percent. Except as noted, includes Puerto Ricc; beginning 1980 includes Alaska and Hawaii. See Historical Statistics, Colonial Times to 1970, series H 751-763, for similar data. See also Appendix III]

Section 5

## Law Enforcement, Courts, and Prisons

section presents data on crimes committed, victims of crimes, arrests, and data related to il violations, and the criminal justice system. The major sources of these data are the Bureau ice Statistics (BJS) and the Federal Bureau of Investigation (FBI). BJS issues several reincluding Sourcebook of Criminal Justice Statistics, Criminal Victimization in the United Prisoners in State and Federal Institutions, Children in Custody, National Survey of Court tation, Census of State Correctional Facilities, Census of Jalls and Survey of Jall Immates, in the United States, and Capital Punishment. In addition, the annual Expenditure and Emvit Data for the Criminal Justice System is issued jointly by BJS and the Bureau of the 1. The Federal Bureau of Investigation's major annual report is Crime in the United States, presents data on reported crimes as gathered from State and local law enforcement agen-

r major sources of these data include: Annual Report of the Director, Federal Court Manage-Statistics, Federal Offenders, and Sentences Imposed Chart issued by the Administrative of the U.S. Courts; Governmental Finances and Public Employment, issued annually by the of the Census; and the Statistical Report, issued annually by the Federal Bureau of Prisons. Il juriediction and law enforcement.—Law enforcement is, for the most part, a function of ind local officers and agencies. The U.S. Constitution reserves general police powers to the By act of Congress, Federal offenses include only offenses against the U.S. Government painst or by its employees while engaged in their official duties, and offenses which involve using of State lines or an interference with interstate commerce. Excluding the military, there separate criminal law jurisdictions in the United States: 1 in each of the 50 States, 1 in the of Columbia, and the Federal jurisdiction. Each of these has its own criminal law and procend its own law enforcement agencies. While the systems of law enforcement are quite similar the States, there are often substantial differences in the penalties for like offenses.

enforcement can be divided into three parts: Investigation of crimes and arrests of persons sted of committing them; prosecution of those charged with crime; and the punishment or ant of persons convicted of crime.

provided by the FBI through its Uniform Crime Reporting Program (UCR). The FBI receives y and annual reports from law enforcement agencies throughout the country, currently repre-1 97 percent of the national population. Each month, city police, sheriffs, and State police file on the number of index offenses that become known to them. The FBI Crime Index ofare as follows: Murder and nonnegligent manslaughter, is based on police investigations, as ed to the determination of a medical examiner or judicial body, includes willful felonious homiand excludes attempts and assaults to kill, suicides, accidental deaths, justifiable homicides, eaths caused by negligence; forcible rape includes forcible rapes and attempts; robbery instealing or taking anything of value by force or violence or threat of force or violence and is attempted robbery; aggravated assault includes assault with intent to kill; burglary includes lawful entry to commit a felony or a theft and includes attempted burglary and burglary folby larceny; larceny includes theft of property or articles of value without use of force and se or fraud and excludes embezzlement, "con games," forgery, etc.; motor vehicle theft inall cases where vehicles are driven away and abandoned, but excludes vehicles taken for many use and returned by the taker. Arson was added as the eighth Index offense in April ollowing a Congressional mandate. Arson includes any willful or malicious burning or attempt with or without intent to defraud, a dwelling house, public building, motor vehicle or aircraft, property of another, etc.

monthly Uniform Crime Reports also contain data on crimes cleared by arrest and on chartics of persons arrested for all criminal offenses. In summarizing and publishing crime data, the FBI does not vouch for the validity of the reports it receives, but presents the data as information useful to persons concerned with the problem of crime and criminal-law enforcement.

National Crime Survey (NCS)—A second perspective on crime is provided by the NCS of the Bureau of Justice Statistics. The NCS includes offenses reported to the police, as well as those not reported (see table below for percent of victimizations reported to the police). Details about the crimes come directly from the victims. No attempt is made to validate the information against police records or any other source. The NCS measures rape, robbery, assault, household and personal larceny, burglary, and motor vehicle theft.

Murder and kidnaping are not covered. Commercial burglary and robbery were dropped from the program during 1977. The so-called victimless crimes, such as drunkenness, drug abuse, and prostitution, also are excluded, as are crimes for which it is difficult to identify knowledgeable respondents or to locate data records.

Crimes of which the victim may not be aware also cannot be measured effectively. Buying stolen property may fall into this category, as may some instances of embezzlement. Attempted crimes of many types probably are under recorded for this reason. Events in which the victim has shown a willingness to participate in illegal activity also are excluded.

In any encounter involving a personal crime, more than one criminal act can be committed against an individual. For example; a rape may be associated with a robbery; or a household offense, such as a burglary, can escalate into something more serious in the event of a personal confrontation. In classifying the survey- measured crimes, each criminal incident has been counted only once—by the most serious act that took place during the incident and ranked in accordance with the seriousness classification system used by the Federal Bureau of Investigation. The order of seriousness for crimes against persons is as follows: Rape, robbery, assault, and larceny. Consequently, if a person were both robbed and assaulted, the event would be classified as robbery; if the victim suffered physical harm, the crime would be categorized as robbery with injury. Personal crimes take precedence over household offenses.

A victimization, basic measure of the occurrence of crime, is a specific criminal act as it affects a single victim. The number of victimizations is determined by the number of victims of such acts. Victimization counts serve as key elements in computing rates of victimization. For crimes against persons, the rates are based on the total number of individuals age 12 and over or on a portion of that population sharing a particular characteristic or set of traits. As general indicators of the danger of having been victimized during the reference period, the rates are not sufficiently refined to represent true measures of risk for specific individuals or households. For further details regarding the NCS, see Criminal Victimization in the United States, by the U.S. Bureau of Justice Statistics.

An incident is a specific criminal act involving one or more victims; therefore the number of incidents of personal crime is lower than that of victimizations.

NCS estimates appearing in 1980 and earlier reports made use of population controls derived from the 1970 census. Thereafter, population estimates based on the 1980 census were used. Victimization rates, key measures of the occurrence of crime, and all percentages generally were unaffected by the change in the estimation procedure. Thus, the vast majority of data appearing after 1980 are compatible with data in previous NCS reports.

# POLICE REPORTING RATES FOR PERSONAL AND HOUSEHOLD CRIMES: 1975 TO 1985 [Percent of victimization reported to the police]

SECTOR AND TYPE OF CRIME	1975	1976	1977	1978	1979	1980	1981	1982	1982	1984	1905
Personal sector:		1									
Crimes of violence	47.2	48.8	46.1	44.2	45.1	47.1	46.6	48.2	47.2	46.6	47.9
Rape	56.2	52.7	58.4	48.8	50.5	41.4	55.7	52.8	47.0	56.0	61.0
Robbery	53.3	53.3	55.5	50.5	55.5	56.8	55.8	56.2	52.6	54.8	53.5
Robbery with injury	65.0	62.9	66.1	65.4	62.2	69.6	66.6	67.1	66.3	60.8	63.5

			i								1

Courts.—Court statistics on criminal offenses and the outcome of prosecutions are incomplete or the country as a whole, although data are available for many States individually. The only national compilations of such statistics were made by the Bureau of the Census for 1932 to 1945 covering a maximum of 32 States.

The bulk of civil and criminal litigation in the country is commenced and determined in the various state courts. Only when the U.S. Constitution and acts of Congress specifically confer jurisdiction ipon the Federal courts may civil litigation be heard and decided by them. Generally, the Federal courts have jurisdiction over the following types of cases: Suits or proceedings by or against the Juited States; civil actions between private parties arising under the Constitution, laws, or treaties if the United States; civil actions between private litigants who are citizens of different States; civil actions between private litigants who are citizens of different States; civil acts in bankruptcy.

There are several types of courts with varying degrees of legal jurisdiction. These jurisdictions notice original, appellate, general, and limited or special. A court of original jurisdiction is one tening the authority initially to try a case and pass judgment on the law and the facts; a court of impellate jurisdiction is one with the legal authority to review cases and hear appeals; a court of peneral jurisdiction is a trial court of unlimited original jurisdiction in civil and/or criminal cases, also salled a "major trial court"; a court of limited or special jurisdiction is a trial court with legal authority over only a particular class of cases, such as probate, juvenile, or traffic cases.

The 94 Federal courts of original jurisdiction are known as the U.S. district courts. One or more if these courts is established in every State and one each in the District of Columbia, Puerto Rico, he Virgin Islands, the Northern Mariana Islands, and Guarn. Appeals from the district courts are also to intermediate appellate courts of which there are 13, known as U.S. courts of appeals and he United States Court of Appeals for the Federal Circuit. The Supreme Court of the United States is the final and highest appellate court in the Federal system of courts.

Juvenile offenders.—For statistical purposes, the FBI and most States classify as juvenile of enders persons under the age of 18 years who have committed a crime or crimes.

Delinquency cases are all cases of youths referred to a juvenile court for violation of a law or ordinance or for seriously "antisocial" conduct. Several types of facilities are available for those adjudicated delinquent, ranging from the short-term physically unrestricted environment to the long-arm very restrictive atmosphere.

Prisoners.—Data on prisoners in Federal and State prisons and reformatories were collected annually by the Bureau of the Census until 1950, by the Federal Bureau of Prisons until 1971, transistred then to the Law Enforcement Assistance Administration, and, in 1979, to the Bureau of Justice Statistics. Adults convicted of criminal activity may be given a prison or jail sentence. A prison a confinement facility having custodial authority over adults sentenced to confinement of more han one year. A jail is a facility, usually operated by a local law enforcement agency, holding persons detained pending adjudication and/or persons committed after adjudication to one year or eas. Nearly every State publishes annual data either for its whole prison system or for each separate State institution.

Naturalizations.—Most aliens acquire U.S. citizenship under the general provisions of the Immigration and Nationality Act of 1952, as amended. As specified by that Act, the requirements a proipective citizen must meet relate to residency, language proficiency, oral character, loyalty to the
Julied States, attachment to the principles of the Constitution, etc. Spouses and children of U.S.
Itizens can be naturalized under less stringent conditions. In certain cases, an administrative, judilate, legislative, or executive waiver of the requirements may be obtained. Naturalization statistics
are also maintained by INS.

Statistical reliability.—For discussion of statistical collection, estimation, and sampling procetures and measures of statistical reliability pertaining to the National Crime Survey and Uniform >rime Reporting Program, see Appendix III.

Historical statistics.—Tabular headnotes provide cross- references, where applicable, to *Historical Statistics of the United States, Colonial Times to 1970.* See Appendix IV.

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and MSAs new also be found in *State and Metropolitan Area Data Book 1996*. For cross-references, see Appendix V.

#### No. 263. CRIMES AND CRIME RATES, BY TYPE: 1977 TO 1986

[Data refer to offenses known to the police. Rates are based on Bureau of the Census estimated resident population as of July 1, except 1980, enumerated as of April 1. Annual totals for years prior to 1984 were adjusted in 1984 and may not be consistent with those in prior editions. See source for details. Minus sign (-) indicates decrease. For definitions of crimes, see text, section 5. See also Historical Statistics, Colonial Times to 1970, series I +) 952-961 for related data]

U.S. Bureau of Justice Statistics, Households Touched by Crime, annual.

#### No. 276. REPORTED CHILD NEGLECT AND ABUSE CASES, BY DIVISION: 1978 TO 1985

[Represents total number of child maltreatment reports documented within the States, including substantisted and unsubstantisted reports. Derived from data provided by State child protective services personnel to the National Study on Child Neglect and Abuse Reporting, conducted by The American Association for Protecting Children, a division of The American Humane Association, and funded through the National Center on Child Abuse and Neglect, CHDS, DHHS. Also, the figures embody the vertition among States with respect to whether they use individual child reports which indicate all involved children in the family. For composition of divisions, see fig. I, inside front cover. Minus sign (—) indicates decline]

YEAR	U.S., total	New England	Middle Atlantic	East North Central	West North Central	South Atlantic	East South Central	West South Central	Moun- tain	Pacific

#### No. 277, CHILD MALTREATMENT CASES REPORTED-SUMMARY: 1976 TO 1985

[In percent, except as indicated. Total number of children reported is generally a duplicate count in that a child may be reported and therefore enumerated more than once each year. Because of differences in enumeration methods, a relatively small number of States (5 to 10) can provide only unduplicated reports, whereas most states provide only duplicated counts)

ITEM	1976	1977	1978	1979	1980	1981	1982	1983	1984	1985

<sup>&</sup>lt;sup>1</sup> Represents lawyers reporting only. Includes an estimated adjustment (subtraction) to account for duplications. Based on reporting from approximately 90 percent of all lawyers. 

<sup>2</sup> Weighted to account for non-reporters and duplicate listings. 

<sup>3</sup> Based on Bureau of the Census estimated resident population, including Armed Forces stationed in area as of July 1, 1984. 

<sup>4</sup> Total for U.S. counts each lawyer only once regardless of number of offices maintained by the lawyer. If, however, a lawyer maintains an office in more than one State, the lawyer is included in the total shown for each State in which the lawyer maintains an office.

Represents zero. Includes individuals who are neither public officials nor employees but who were involved with public libials or employees in violating the law, not shown separately. Increases in the number indicted and convicted between 82 and 1963 resulted from a greater focus on federal corruption nationwide and more consistent reporting of cases involving services.

<sup>-</sup> Represents zero. Z Fewer than 50. ¹ Source of 1979 and 1983 jail totals: Jail censuses. Source of totals for years: Jail sample surveys, June 30 of each year. Source of State and regional jail populations: The 1983 Jail Census. Incliboth convicted and unconvicted adults held in locally operated jails. Connecticut, Delaware, Hawaii, Rhode Island, and Ver had integrated jail/prison systems; the total incarcerated population for those States appears as the prison. ¹ Includes all inmates of Federal and State institutions. ¹ Includes all adults under State parole supervision, whether from prison via parole board decision or mandatory release, who were sentenced to more than 1 year in prison. ⁴ It adults who, as part of a State, or local court order, have been placed under the supervisory authority of a probatio ¹ Includes both State and Federal.

Source: Except as noted, U.S. Bureau of Justice Statistics, Probation and Parole, annual; The 1983 Jall Consus; and Patietti State and Faderal Institutions on December 31, annual.

### 309. PRISONERS UNDER JURISDICTION OF STATE AND FEDERAL CORRECTIONAL AUTHORITIES— SUMMARY, BY STATE: 1980 TO 1986

Not available. 

States can report three estimates of prison capacity: rated, operational, and design. Some States report stimates or the same number for all estimates. Excludes persons housed in local jails. 

"Unpublished Bureau of the estimates as of July 1, 1986 for the resident population were used to calculate rates. 

"Includes persons held under rates. 

"Includes persons held under the same number of prisoners with sentences of 2 years or more instead of an 1 year. ME, MD, and NC. 

"Includes prisoners held in jails because of crowding: ME, MA, IL, WI, VA, SC, KY, AL, ID, UT, CA, and WA. 

"Includes both jail and prison inmates (State has combined jail and prison system), rend Dec. 21. 

"Excludes State prisoners held in local jails because of overcrowding. 

"Includes an undetermined of prisoners with sentences shorter than 1 year. 

"Numbers are custodial, not jurisdictional counts. 

"Yearend an 3, 1986. 

"Scapacity figures for males only.

No. 310. Average Time Served by Prisoners Released From Federal Institutions for First Time, 1970 to 1986, and by Offense, 1986

[For fleoal years ending in year shown; see text, section 9. In computing everages, sentences to tile and more than 45 years were counted as 45 years; minority sentences of juvenile delinquents were counted from date of sentence to 21st birthday]

### ). 314. PRISONERS UNDER SENTENCE OF DEATH AND EXECUTED UNDER CIVIL AUTHORITY-STATES: 1940 TO 1986

cultions took place in Maine, Michigan, Minnesota, New Hampshire, North Dakota, Rhode Island, and Wisconein from 1940 56. Maine, Minnesota, and Wisconein never authorized the death penelty during the period. New Hampshire and Rhode authorized it for most of the 4 decades but did not apply it. Michigan abolished the penelty in 1953, and North Dakota of the punishment statute to lapse in 1975. Alastia and Hawaii could enter those data after receiving statehood in 1959, illher has authorized the death penelty]

Section 6

# Geography and Environment

ection presents a variety of information on the physical environment of the United States, with basic area measurement data and ending with climatic data for selected weather statum the country. The subjects covered between those points are mostly concerned with nental trends, but include such related subjects as land use and ownership, water conti, hazardous waste sites, threatened and endangered wildlife, and expenditures for pollutement and control.

iformation in this section is selected from a wide range of Federal agencies that compile ifor various administrative or regulatory purposes, such as the Environmental Protection Geological Survey, National Oceanic and Atmospheric Administration, and General Serv-inistration. Other agencies include the Bureau of the Census, which presents nationwide assurement information; the Council on Environmental Quality (CEQ), which presents data onmental conditions and pollutarits in its annual report; and the Bureau of Economic Analy-th compiles data on pollution abatement and control expenditures.

-Area measurements were first conducted for the United States as a whole, and gradually lended to the individual States. The annual report of the U.S. General Land Office for 1850 id the first reference to measurements of areas of the States and Territories. In 1881, as he 1880 Census of Population, the Bureau of the Census laid the foundation for accurate alled area measurement in the United States. For the first time, an account was given of the and maps employed, the water bodies included, and the outer limits of the United States a basis for measurement. As part of the 1940 census, the Bureau published Areas of the Nates: 1940, in which data were presented on the total land and inland water areas of the counties, places, and minor civil divisions. Since the 1940 census, the Bureau has published asurement figures in each succeeding census. In 1984, the Bureau undertook a new measof the areas of places with at least 1,000 inhabitants, minor civil divisions, and census fivisions of the 1980 census. The results were published in Area Measurement Reports, iE-20, a series of State reports and a U.S. summary. For 1980, the areas of all States and were completely remeasured, using newer large-scale maps and more modern equipment. I area results for these areas are published in 1980 Census of Population, vol. 1, chapter A (series PC80-1-A). Data for places and selected minor civil divisions with a population of nd over, metropolitan areas, and urbanized areas as well as States and counties are con-1 the U.S. summary report. Data for States, counties, and the selected places and MCDs

available on public use tape Master Area Reference File (MARF) 2. raphy.—The Geological Survey conducts investigations, surveys, and research in the fields raphy, geology, topography, land use/land cover, mineralogy, hydrology, and geothermal resources as well as natural hazards. In cooperation with State and local agencies, the Gesurvey prepares and publishes topographic, land use/land cover, geologic, and hydrologic and data compilations. The Geological Survey provides United States cartographic data the National Cartographic Information Center, water resources data through a multi-volume of Information on Water Data, and a variety of research and Open-File reports which are sed monthly in New Publications of the Geological Survey.

lational Ocean Service, a division of NOAA, is responsible for coastal and geodetic surveys asurement of certain physical phenomena. Currently, its primary functions are to provide or marine and air navigation, to maintain a basic network of geodetic control, and to compile islc data for engineering, scientific, commercial, industrial, and defense needs.

rentory of the nation's land resources by type of use/cover was conducted by the Soil Conn Service in 1982. The results, published in the 1982 National Inventory of Land Resources, I non-Federal land in Puerto Rico, the Virgin Islands, and the U.S. except Alaska.

prepared by the Bureau of the Census show boundaries of various types of political and al areas, such as places, county subdivisions, census tracts, and urbanized areas and are as of the specific census. An inventory of most of these areas was published for the 1980 in Geographic Identification Code Scheme (PHC80-R5) and for the 1982 economic centre Geographic Reference Manual (EC82-R-1). The Census Bureau maintains a current inventory

tory of political units and, for many entities, their legal boundaries through its Boundary and Annexation Survey.

Environment.—The CEQ is responsible for overseeing the environmental assessment process, recommending national environmental policies, analyzing changes and trends in the environment, and for reviewing Federal programs affecting the environment. It reports on environmental conditions, trends, programs and activities in its annual publication, Environmental Quality. The CEQ has also published unique compilations of environmental data in Environmental Statistics, 1979, and Environmental Trends. The principal Federal agency responsible for pollution abatement and control activities is the Environmental Protection Agency (EPA). It is responsible for establishing and monitoring national air quality standards, water quality activities, solid and hazardous waste disposal, and control of toxic substances.

Air sampling, conducted by the Public Health Service, began in 17 communities in 1953; in 1957 the National Air Surveillance Network was established and, by the late 1980's, covered approximately 280 urban and 30 rural stations. The operation of the stations was decentralized in 1972 to the 10 regional EPA offices and many of the stations were in turn assimilated into State and locally operated air monitoring networks. The Network determines the extent and nature of air pollution and studies trends in levels of atmospheric contaminants.

National Ambient Air Quality Standards (NAAQS) for suspended particulate matter, sulfur dioxide, photochemical oxidants, carbon monoxide, and nitrogen dioxide were originally set by the EPA in April 1971. Every 5 years each of the NAAQS are reviewed and revised if new health or welfare data indicates that a change is necessary. The standard for photochemical oxidants now califor ozone was revised in February 1979. Also, a new NAAQS for lead was promulgated in October 1978. Table 331 gives some of the health-related standards for the six air pollutants having NAAQS. Responsibility for demonstrating compilance with or progress toward achieving these standards lies with the State agencies. There are approximately 2,100 non-Federal sampling stations for suspended particulates, 550 for sulfur dioxide, 360 for carbon monoxide, 525 for ozone, 240 for nitrogen dioxide, and 240 for lead. Data from these State networks are periodically submitted to EPA's National Aerometric Data Bank for summarization in annual reports on the nationwide status and trends in air quality; for details, see National Air Quality and Emissions Trends Report, 1985.

Pollution abatement and control expenditures.—Data on expenditures for pollution abatement and control are compiled and published by the U.S. Bureau of Economic Analysis (BEA), the U.S. Bureau of the Census, and the CEQ as part of ongoing programs. BEA conducts surveys on national expenditures for pollution abatement and control and presents the data in its Survey of Current Business. The U.S. Bureau of the Census collects data on State and local government and industry expenditures on control activities. Data on government expenditures were reported in the annual Environmental Quality Control: Government Finances, which was discontinued after the report for fiscal year 1980. Industry data are reported annually in Current Industrial Reports. CEQ publishes data in Environmental Quality.

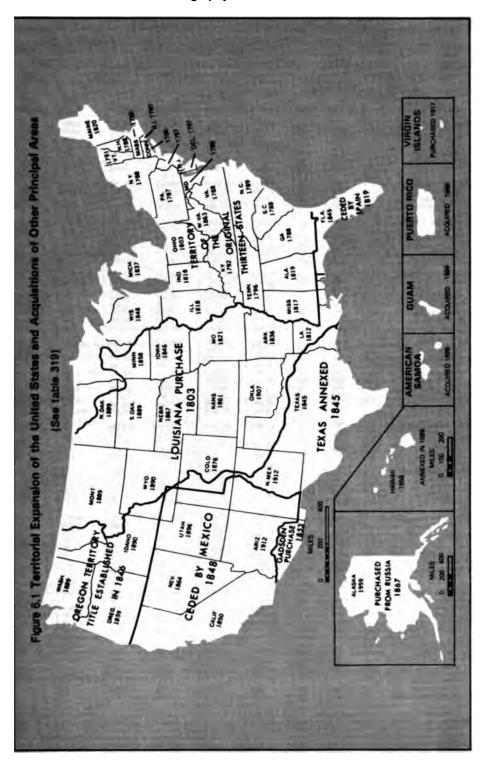

Climate.—NOAA, through the National Weather Service and the National Environmental Satellite, Data and Information Service, is responsible for data on climate. NOAA maintains about 11,600 weather stations, of which over 3,000 produce autographic precipitation records, about 600 take hourly readings of a series of weather elements, and the remainder record data once a day. These data are reported monthly in the Climatological Data (published by State), and monthly and annually in the Local Climatological Data (published by location for major cities).

The climatological temperature, precipitation, and degree day normals listed in this publication are derived for comparative purposes and are averages for the 30-year period, 1951-80. For stations that did not have continuous records for the entire 30 years from the same instrument alle, the normals have been adjusted to provide representative values for the current location. The information in all other tables is based on data from the beginning of the record at that location through 1985, except as noted.

The degree day normals are used to determine relative estimates of heating and cooling requirements for buildings. Each degree that the average temperature for a day is below 65 degrees F produces one heating degree day. For example, if the maximum temperature is 70 degrees F and the minimum temperature is 22 degrees F, the average temperature for the day is 61 degrees, resulting in four (4) heating degree days. Cooling degree days are calculated in a similar fashion for each degree that the average temperature is above 65 degrees F. The monthly degree day normals represent the average accumulation of the daily values for the month.

Historical statistics.—Tabular headnotes provide cross- references, where applicable, to Historical Statistics of the United States, Colonial Times to 1970. See Appendix IV.

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and MSAs may also be found in *State and Metropolitan Area Data Book 1986*. For cross-references, see Appendix V.

### No. 319. Territorial Expansion of the United States and Acquisitions of Other Areas

[One square mile = 2.59 square kilometers. Boundaries of all territories listed under "United States" were indefinite, at least in part, at time of acquilation. Area figures shown here represent precise determinations of specific territories which have been marked upon maps, based upon interpretations of the several treaties of cession, which are necessarily debatable. These determinations were made by a committee consisting of representatives of various governmental agencies in 1912. Subsequently these figures were adjusted to bring them into agreement with remeasurements made in 1900. See also Historical Statistics, Colonial Times to 1970, series J 1-2]

### No. 321. AREA AND ACQUISITION OF THE FEDERAL PUBLIC DOMAIN: 1781 TO 1986

[In millions of acres. Areas of acquisitions are as computed in 1912, and do not agree with figures in square miles shown in table 319 which include later adjustments and reflect subsequent remeasurement. Excludes outlying areas of the United States amounting to 645,949 acres in 1978. See also Historical Statistics, Colonial Times to 1970, series J 3-5]

Z. Less than 50,000. ¹ Owned by Federal Government. Comprises original public domain plus acquired lands. Estimated from imperfect data available for indicated years. Prior to 1959, excludes Alaska, and 1980, Haweli. Source: Beginning 1955, U.S. General Services Administration, Inventory Report on Real Property Owned by the United States Throughout the World, annual. ² Data for Louisiane Purchase exclude areas eliminated by Treaty of 1819 with Spain. Such areas are included in figures for Mexican Cession. ² Represents drainage basin of Red Filver of the North, south of 48th parallel. Authorities differ as to method and date of its acquiettion. Some hold it as part of Louisiana Purchase; others, as acquired from Great Britain.

### NO. 325, LENGTHS OF PRINCIPAL NORTH AMERICAN RIVERS

is rivers 600 miles or more in length. Length represents distance to designated outflow from (a) original headwater of river where name applies to entire length of channel, or (b) upper limit of channel so named, usually the junction of 2 as or headwater streams. One mile = 1.000 (diometers)

\*Includes domestic public supply and commercial.

## No. 329. NATIONAL AMBIENT WATER QUALITY IN RIVERS AND STREAMS—VIOLATION RATE: 1975 TO 1986

[te percent. Violation level based on U.S. Environmental Protection Agency water quality criteria. Violation rate represents the proportion of all measurements of a specific water quality pollutant which exceeds the "violation level" for that pollutant. "Violation" does not necessarily imply a legal violation. Data based on U.S. Geological Survey's National Stream Quality Accounting Network (NASQAN) data system; for details, see source. Years refer to water years. A water year begins in Oct. and ends in Sept. μg=micrograms. mg=militgrams. For metric conventions, see p. xiv)

POLLUTANT	VIOLATION LEVEL	1975	1978	1979	1980	1981	1982	1983	1984	1985	1986

### No. 334. Municipal Solid Waste Generation, Recovery, and Disposal: 1980 to 1984

(in millions of tons, except as indicated. Covers post-consumer residential and commercial solid westes which comprise the major portion of typical municipal collections. Excludes mining, agricultural and industrial processing, demotition and construction wastes, severge studys, and junked autos and obsolete equipment wastes. Based on material-flows estimating procedure and wat weight as generated.

Section 7

## Parks, Recreation, and Travel

This section presents statistics on national parks and forests, State parks, recreational activities, the arts and humanities, and domestic and foreign travel.

Parks and recreation.—The Department of the Interior has responsibility for administering the national parks, As part of this function, it compiles data and issues various reports relating to the usage of public parks for recreation purposes. The National Park Service publishes information on visits to national park areas in its annual report, National Park Statistical Abstract, the Index-National Park System and Related Areas, a biannual report, presents data on acreage in public parks; and its National Parks and Landmarks gives brief descriptions of each area administered by the Service and also covers sites eligible for registry as natural or national historic landmarks and nonfederally owned national historic sites.

Statistics for State parks are compiled by the National Association of State Park Directors which issues its annual *Information Exchange*. The Bureau of Land Management, in its *Public Land Statistics*, also issues data on recreational use of its lands. The Department of Agriculture's Forest Service, in its *Report of the Forest Service*, issues data on recreational uses of the national forests.

Statistics on recreation other than usage of public lands have not generally been compiled and published in a systematic way. In general, more data are available in the files of public and private bodies than have been published; and much of what is published is in forms not physically permanent nor likely to be preserved in libraries and other reference sources. The series presented here represent only the more readily available data.

Visitation.—Statistics presented on visitation to various recreation areas are collected by several different agencies and groups. The methodology used to collect these results, may vary accordingly from visual counts and estimates to the use of electromagnetic traffic counters. Many factors besides the methodology, may affect the results such as multiple or random access points, irregular boundaries, and many other general factors that may affect usage. In using and comparing these data, one should also be aware of several different definitions that follow: Recreation visit, which is the entry of any person into an area for recreation purposes; nonrecreation visits, which include visits going to and from inholdings, through traffic, tradespeople and personnel with business in the area; and visitor hour, which constitutes the presence of a person in a recreation area or site for recreational purposes for periods of time aggregating 60 minutes.

Recreation and leisure activities.—Statistics on the participation in various recreation and leisure time activities presented here are based on several sample surveys. Data on participation in fishing, hunting, and other forms of wildlife-associated recreation are published every five years by the U.S. Department of Interior, Fish and Wildlife Service. The most recent data are from the 1965 survey. Data on participation in various sports recreation activities are published by the National Sporting Goods Association. Data on participation and attendance at various art performances by demographic characteristics are presented by the National Endowment for the Arts.

Travel.—Information on foreign travel and personal expenditures abroad, as well as expenditures by foreign citizens traveling in the United States, is compiled annually by the U.S. Bureau of Economic Analysis and published in selected issues of the monthly Survey of Current Business. Data on the number of passports issued annually to U.S. citizens are to be found in the annual Summary of Passport Statistics issued by the U.S. Dept. of State's Bureau of Consular Affairs. Statistics on arrivals to and departures from the United States by air are reported by the Department of Transportation in cooperation with the U.S. Immigration and Naturalization Service in International Air Travel Statistics. Data on domestic travel, business receipts and employment of the travel industry, and travel expenditures are published by the U.S. Travel Data Center, a national nonprofit group for travel and tourism located in Washington, DC. Other data on household transportation characteristics may be found in section 21.

Historical statistics.—Tabular headnotes provide cross- references, where applicable, to Historical Statistics of the United States, Colonial Times to 1970. See Appendix IV.

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and MSAs may also be found in *State and Metropolitan Area Data Book 1988*. For cross-references, see Appendix V.

# No. 356. VISITATION TO FEDERAL RECREATION AREAS, BY ADMINISTERING FEDERAL AGENCY: 1978 TO 1986

[In millions of visitor hours. For years ending September 30, except as indicated. Covers persons entering and using a recreation area over a specified period of time. For definition of visitor hour, see text, section 7. Data may not be comparable for all years]

Figure 8.2 Voter Participation in Presidential Elections: 1972 to 1984

### Section 8

### **Elections**

This section relates primarily to Presidential, congressional, and gubernatorial elections. Also presented are summary tables on congressional legislation, State legislatures, Black, Hispanic, and female officeholders, population of voting age, voter participation, and campaign finances.

Official statistics on Federal elections, collected by the Clerk of the House, are published biennially in Statistics of the Presidential and Congressional Election and Statistics of the Congressional Election. Federal and State elections data appear also in America Votes, a biennial volume of the Elections Research Center, Washington, DC. Federal elections data also appear in the U.S. Congressional Directory, and in official State documents. Data on reported registration and voting are obtained by the U.S. Bureau of the Census as part of the Current Population Survey (CPS) and are published in Current Population Reports, series P-20 (see text, section 1).

Almost all Federal, State, and local governmental units in the United States conduct elections at various intervals for different offices and other purposes. The conduct of elections is regulated by State laws or, in some cities and counties, by local charter. An exception is thet the U.S. Constitution prescribes the basis of representation in Congress and the manner of electing the President, and grants to Congress the right to regulate the times, places, and manner of electing Federal officers. Amendments to the Constitution have prescribed national criteria for voting eligibility. The 15th Amendment, adopted in 1870, gave all citizens the right to vote regardless of race, color, or previous condition of servitude. The 19th Amendment, adopted in 1919, further extended the right to vote to all citizens regardless of sex. The payment of poll taxes as a prerequisite to voting in Federal elections was banned by the 24th Amendment in 1964. In 1971, as a result of the 26th Amendment, eligibility to vote in national elections was extended to all citizens, 18 years old and over.

Presidential election.—The Constitution specifies how the President and Vice President are selected. Each State elects, by popular vote, a group of electors equal in number to its total of members of Congress. Subsequent to the election, the electors meet in their respective States to vote for President and Vice President. Usually, each elector votes for the candidate receiving the most popular votes in his or her State. A majority vote of all electors is necessary to elect the President and Vice President. If no candidate receives a majority, the House of Representatives, with each State having one vote, is empowered to elect the President and Vice President, again, with a majority of votes required.

The 22d Amendment to the Constitution, adopted in 1951, limits presidential tenure to 2 elective terms of 4 years each, or to 1 elective term for any person who, upon succession to the Presidency, has held the office or acted as President for more than 2 years. The 23d Amendment, adopted in 1961, grants the District of Columbia 3 presidential electors, a number equal to that of the least populous State.

Congressional election.—The Constitution provides that Representatives be apportioned among the States according to their population; that a census of population be taken every 10 years as a basis for apportionment; and that each State have at least 1 Representative. At the time of each apportionment, Congress decides what the total number of Representatives will be. Since 1912, the total has been 435, except during 1960 to 1962 when it increased to 437, adding 1 Representative each for Alaska and Hawaii. The total reverted to 435 after reapportionment following the 1960 census. Members are elected for 2-year terms, all terms covering the same period. The District of Columbia, American Samoa, Guam, and the Virgin Islands each elect one nonvoting Delegate and Puerto Rico elects a nonvoting Resident Commissioner.

The Senate is composed of 100 members, 2 from each State, who are elected to serve for a term of 6 years. One-third of the Senate is elected every 2 years. Senators were originally chosen by the State legislatures. The 17th Amendment to the Constitution, adopted in 1913, prescribed that Senators be elected by popular vote.

Voter eligibility and participation.—The Census Bureau publishes estimates of the population of voting age and the percent casting votes in each State for Presidential and congressional elec-

tion years. These voting-age estimates include a number of persons who meet the age requirement but are not eligible to vote, (e.g. aliens and some institutionalized persons). In addition, since 1964, voter participation and voter characteristics data have been collected during November of election years as part of the CPS. These survey data include noncitizens in the voting age population estimates, but exclude members of the Armed Forces and the institutional population.

Statistical reliability.—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

Historical statistics.—Tabular headnotes provide cross- references, where applicable, to Historical Statistics of the United States. Colonial Times to 1970. See Appendix IV.

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and MSAs may also be found in *State and Metropolitan Area Data Book 1986*. For cross-references, see Appendix V.

No. 397, VOTE CAST FOR PRESIDENT, BY POLITICAL PARTIES: 1920 TO 1964

[Prior to 1980, excludes Aleska and Hewel; prior to 1984, excludes DC. Vote cast for major party candidates includes the votes of minor parties cast for those candidates. See also Historical Statistics, Colonial Times to 1970, series Y 79-83 and Y 135]

### No. 401. VOTE CAST FOR UNITED STATES REPRESENTATIVES, BY MAJOR POLITICAL PARTIES-STATES: 982 TO 1986

[In thousands, except percent. In each State, totals represent the sum of votes cast in each Congressional District or votes cast for Representative at Large in States where only one member is elected. In all years there are numerous districts within the State where either the Republican or Democratic party had no candidate. In some States the Republican and Democratic vote includes votes cast for the party candidate by endorsing parties. See also Historical Statistics, Colonial Times to 1970, series Y 211–214]

<sup>-</sup> Represents zero.

¹ Includes vote cast for minor parties.

¹ Includes vote cast for non-voting Delegate at Large in District of Columbia.

¹ Total vote for Republican candidates was 195,077; for Democratic candidates, 194,942.

¹ Includes votes cast by other endorsing parties for Democratic and Republican candidates.

¹ Total vote for Democratic candidates was 195,077; for Democratic candidates was 1,033,033; for Republican candidates, 1,032,948.

¹ In 1962 Districts 8, 10 and 17 were unopposed; in 1984 Districts 1, 2, 3, 5, 12, 13 and 17 were unopposed; in 1986 Districts 3.

¹ In 1962 Districts 8, 10 and 17 were unopposed.

¹ 1984, no data for District 3.

¹ 1982 and 1984 data are for September open primary because there were no general election runoffs. 1986 data are for general election runoffs in two districts. 1986 open primary totals—total, 755,680; Democratic, 599,291; Republican, 148,007.

¹ In 1986 District 6 was unopposed.

X Not applicable. 

No candidate. 

State law does not require tabulation of votes for unopposed candidates. 

The winning Republican candidate received 75,979 votes; the Democratic candidate, 75,932. 

Louisiana holds an open-primary election with candidates from all parties running on the same ballot. Any candidate who receives a majority is elected; if no candidate receives 50 percent, there is a run-off election in November between the top two finishers. 

Candidate lated won seat in open-primary.

The winning Republican candidate received 72,328 votes; the Democratic candidate, 72,250.

# No. 423. VOTER REGISTRATION—REGISTERED VOTERS, 1980 TO 1986, AND REGISTRATION DEADLINES AND RESIDENCY REQUIREMENTS, 1986

[Registration figures are based on final and official registration statistics provided by Secretaries of State and State Registrars. The accuracy of registration figures varies according to the stringency of purps conducted in each State and locality. There is, therefore, some inflation in these figures, although the trends between years are largely to be accounted.

NA Not available. X Not applicable. ¹A—Election day registration. B=Registration closes 10 days or less before election. C—Registration closes 11-29 days before election. D=Registration closes 30 or more days before election. ²E—No residency requirement, F—Yoter must be bonsitide resident (no time requirement). G—Residency for 10-29 days before election required. \*Includes voters registered with other parties and with no party (independents), not shown separately. \*Number shown represents the highest number of votes cast for the Senstantial election, the gubernstorial election or all races for the U.S. House of Representatives. \*Estimate based on actual registration statistics from the States which tesp registration records. Percentages are the actual percentages of the voting age population who registered in the States, for which actual registration figures are available. The estimates are derived by applying that percentage to the national voting age population figure. \*North Dakota does not require registration. \*No states/days registration.

Section 9

# State and Local Government Finances and Employment

This section presents data on revenues, expenditures, debt, and government employment of State and local governments. Nationwide statistics relating to State and local governments, their numbers, finances, and employment, are compiled primarily by the Bureau of the Census through a program of censuses and surveys. Every fifth year (for years ending in "2" and "7") the Bureau conducts a Census of Governments involving collection of data for all governmental units in the United States. In addition, the Bureau conducts annual surveys which cover all the State governments and a sample of local governments.

Publications issued annually by the Bureau of the Census include a report on governmental finances which presents figures for the Federal Government, nationwide totals for State and local governments, by type, and State-local data by States. Also issued annually are a series of publications on State, city, county, and school finances, and on city, county, and other public employment. Financial data are published in the GF publication series; employment data in the GE series. There is also a series of quarterly reports covering tax revenue, and of finances of major public employee retirement systems, as well as a series (GSS) of special studies. Recurrent Publications on Governments describes the publication program.

Basic information for Census Bureau statistics on governments is obtained by mail canvass from State and local officials; however, financial data for each of the State governments and for many of the large local governments are compiled from their official records and reports by Census Bureau personnel. In over half of the States, all or part of local government financial data are obtained through central collection arrangements with State governments. Financial data on the Federal Government is based on the Budget published by the Office of Management and Budget (see page 289).

Governmental units.—The governmental structure of the United States includes, in addition to the Federal Government and the States, thousands of local governments—counties, municipalities, townships, school districts, and numerous kinds of "special districts." As shown by table 429, almost 83,200 local governments were identified by the 1987 Census of Governments. As defined by the census, governmental units include all agencies or bodies having an organized existence, governmental character, and substantial autonomy. While most of these governments can impose taxes, many of the special districts—such as independent public housing authorities, the New York Port Authority, and numerous local irrigation, power, and other types of districts—are financed from rentals, charges for services, benefit assessments, grants from other governments. toll charges, and other nontax sources. The count of governments excludes semi-autonomous agencies through which States, cities, and counties sometimes provide for certain functions—for example, "dependent" school systems, State institutions of higher education, and certain other "authorities" and special agencies which are under the administrative or fiscal control of an established governmental unit.

Finances.—Unless otherwise stated, financial data relate to fiscal years ending in the year shown. Most States end their fiscal year June 30; however Alabama and Michigan end their fiscal years Sept. 30; New York, March 31; and Texas, Aug. 31. The Federal Government ended the fiscal year June 30 until 1976 when its fiscal year, by an act of Congress, was revised to extend from Oct. 1 to Sept. 30. A three-month quarter (July 1 to Sept. 30, 1976) bridged the transition. Beginning 1963, local government figures are for fiscal years which close at various dates during the 12 months ended June 30 of the year specified (exceptions are school districts in Alabama, which close Sept. 30 of the specified year; school districts in Texas, which close Aug. 31 of year cited; and Washington, DC which ends its fiscal year Sept. 30); figures for 1982 and earlier years are for fiscal years ended during the calendar year.

Nationwide government finance statistics have been classified and presented in terms of uniform concepts and categories, rather than according to the highly diverse terminology, organization, and fund structure utilized by individual governments. Accordingly, financial statistics which appear here for the Federal Government and for individual States or local governments have been standardized and may not agree directly with figures appearing in the original sources.

Statistics on governmental finances distinguish among general government, utilities, liquor stores, and insurance trusts. General government comprises all activities except utilities, liquor stores, and insurance trusts. Utilities include government water supply, electric light and power, gas supply, and transit systems. Liquor stores are operated by 17 States and by local governments in six States. Insurance trusts relate to employee retirement, unemployment compensation, and other social insurance systems administered by the Federal, State, and local governments.

Data for cities relate only to municipal corporations and their dependent agencies, and do not include amounts for other local governments overlying city areas. Therefore, expenditure figures for "education" do not include spending by the separate school districts which administer public schools within most municipal areas. Variations in the assignment of governmental responsibility for public assistance, health, hospitals, public housing, and other functions to a lesser degree also have an important effect upon reported amounts of city expenditure, revenue, and debt. Therefore, any intercity comparisons based upon these figures should be made with caution, and with due recognition of variations that exist among urban areas in the relative role of the municipal corporation.

Employment and payrolts.—These data are based mainly on mail canvassing of State and local governments. Payroll includes all salaries, wages, and individual fee payments for the month specified, and employment relates to all persons on governmental payrolls during a pay period of the month covered—including paid officials, temporary help, and (unless otherwise specified) part-time as well as full-time personnel. Figures shown for individual governments cover major dependent agencies such as institutions of higher education, as well as the basic central departments and agencies of the government.

Statistical reliability.—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

Historical statistics.—Tabular headnotes provide cross- references, where applicable, to Historical Statistics of the United States, Colonial Times to 1970. See Appendix IV.

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and MSAs may also be found in *State and Metropolitan Area Data Book 1986*. For cross-references, see Appendix V.

i zero. X Not applicable. Z Rounds to zero. ¹ Data adjusted to system for reporting State and local ore differ from figures in section 10 tables. ² Represents average for period of intervals shown; for 1970, 800. For explanation, see Guide to Tabular Presentation. Minus sign (\_\_\_\_) indicates decrease. ² Based on resident population enumerated as of April 1, 1970, and 1980 nt population enumerated as of April 1, 1970, and 1980 nt population enumerated as of April 1, 1970, and 1980 nt population enumerated as of April 1, 1980. Excludes intergovernmental amounts. ¹ Includes other amounts, rately. ² Duplicative intergovernmental transactions are excluded. ⁴ Minor amounts included in individual ¹ Includes customs. ² End of fiscal year.

Sureau of the Census, Census of Governments: 1977 and 1982, Historical Statistics on Governmental Finances (GC 77(6)-4 and 82(6)-4); and Governmental Finances, series GF No. 5, annual.

No. 431. ALL GOVERNMENTS-REVENUE AND EXPENDITURE, BY LEVEL OF GOVERNMENT: 1986

[For flecal year ending in year shown, see text, section 9. Local government amounts are estimates subject to sampling variation; see source and Appendix III. See also Historical Statistics, Colonial Times to 1970, series Y 505-637 and Y 652-848]

#### No. 452. NUMBER OF LOCAL GOVERNMENTS, BY TYPE-STATES: 1982 AND 1987

[Governments in existence in January. Limited to governments actually in existence. Excludes, therefore, a few counties and numerous townships and "incorporated places" existing as areas for which statistics can be presented as to population and other subjects, but lacking any separate organized county, township, or municipal government]

## State and Local Government Finances and Employment

#### No. 455. CITY GOVERNMENTS—SUMMARY OF FINANCES: 1980 TO 1985

[For flecal years ending in year shown; see text, section 9. Data revised since originally published and may not agree, therefore, with table 458. Represents all municipalities and their dependent agencies (including dependent school systems where applicable); excludes other local governments overlying city areas. Includes sample-based estimates for cities of less than 50,000; thus subject to sampling variation. See Appendix III and source)

<sup>:</sup> U.S. Bureau of the Census, City Employment, series GE, No. 2, annual.

Section 10

# Federal Government Finances and Employment

section presents statistics relating to the financial structure and the civilian employment of israil Government. The fiscal data cover taxes, other receipts, outlays, and debt. The princices of fiscal data are The Budget of the United States Government and related documents, id annually by the Office of Management and Budget (OMB), and the Department of the y's United States Government Annual Report and its Appendix. Detailed data on tax returns lections are published annually by the Internal Revenue Service. The personnel data relateing and payrolls for the various public functions and agencies, to employee characteristics, civil service status; they are published by the Office of Personnel Management and the of Labor Statistics (see p. 290). The primary source for data on public lands is Public Land is, published annually by the Bureau of Land Management, Department of the Interior. Data raily owned land and real property are collected by the General Services Administration and and in its annual Inventory Report on Real Property Owned by the United States Throughout tid.

et concept.—Under the unified budget concept, all Federal monies are included in one hensive budget. These monies comprise both Federal funds and trust funds. Federal funds ved mainly from taxes and borrowing and are not restricted by law to any specific governarpose. Trust funds, such as the Unemployment Trust Fund, collect certain taxes and other for use in carrying out specific purposes or programs in accordance with the terms of the resement or statute. Fund balances include both cash balances with Treasury and investin U.S. securities. Part of the balance is obligated, part unobligated. In recent years, the totals, under provisions of law, have excluded some Federal activities—including the Federicing Bank, the Postal Service, the Synthetic Fuels Corporation, and the lending activities of all Electrification Administration. The Balanced Budget and Emergency Deficit Control Act of I.L. 99-177) repealed the off-budget status of these entities and placed social security (Fediage and survivors insurance and the Federal disability insurance trust funds) off-budget. social security is now off-budget and, by law, excluded from coverage of the congressional resolutions, it continues to be a Federal program. Data showing unified budget totals of receipts and outlays that incorporate social security are presented in the 1986 Budget for rs 1936 to 1992; more detailed tables generally show data since 1976.

ipts arising from the Government's sovereign powers are reported as governmental receipts; r receipts, i.e., from business-type or market-oriented activities, are offset against outlays. are reported on a checks-issued (net) basis (i.e., outlays are recorded at the time the to pay bills are issued).

concept.—For most of U.S. history, the total debt consisted of debt borrowed by the y (i.e., public debt). The present debt series, includes both public debt and agency debt. is Federal debt includes money borrowed by the Treasury and by various Federal agencies; broadest generally used measure of the Federal debt. Total public debt is covered by a y debt limitation, currently \$2.4 trillion through August 17, 1987, and includes only borrowing Treasury.

sury receipts and outleys.—All receipts of the Government, with a few exceptions, are deto the credit of the U.S. Treasury regardless of ultimate disposition. Under the Constitution, sey may be withdrawn from the Treasury unless appropriated by the Congress.

day-to-day cash operations of the Federal Government clearing through the accounts of the easury are reported in the *Daily Treasury Statement*. Extensive detail on the public debt is ad in the *Monthly Statement of the Public Debt of the United States*.

st receipts such as taxes, customs duties, and miscellaneous receipts, which are collected emment agencies, and outlays represented by checks issued and cash payments made by ng officers as well as government agencies are reported in the Monthly Treasury Statement sipts and Outlays of the United States Government and in the Treasury's United States Government and in the Treasury's United States Government agencies are on the same basis as the unified budget.

quarterly *Treasury Bulletin* contains data on fiscal operations and related Treasury activities, g financial statements of Government corporations and other business-type activities.

Income tax returns and tax collections.—Tax data are compiled by the Internal Revenue Service of the Treasury Department. The Annual Report of the Commissioner and Chief Counsel of the Internal Revenue Service gives a detailed account of tax collections by kind of tax and by regions, districts, and States. The agency's annual Statistics of Income reports present detailed data from individual income tax returns and corporation income tax returns. The quarterly Statistics of Income Bulletin has, in general, replaced the incorporated business supplemental Statistics of Income publications which presented data on such diverse subjects as local area data for individuals as well as data from fiduciary income tax and estate tax returns, sales of capital assets by individuals, international income and taxes reported by corporations and individuals, and estate tax wealth.

Employment and payrolls.—The Office of Personnel Management collects employment and payroll data from all departments and agencies of the Federal Government, except the Central Intelligence Agency, the National Security Agency, and the Defense Intelligence Agency. Employment figures represent the number of persons who occupied civilian positions at the and of the report month shown and who are paid for personal services rendered for the Federal Government, regardless of the nature of appointment or method of payment.

Federal payrolls include all payments for personal services rendered during the report month and payments for accumulated annual leave of employees who separate from the service. Since most Federal employees are paid on a biweekly basis, the calendar month earnings are partially estimated on the basis of the number of work days in each month where payroll periods overlap.

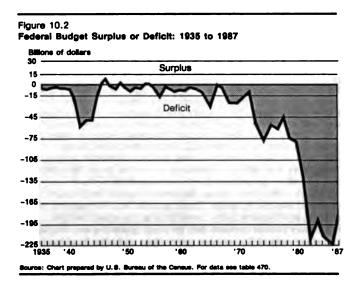

Federal employment and payroll figures are published by the Office of Personnel Management in its Monthly Release of Federal Civilian Workforce Statistics. It also publishes blennial employment data for minority groups, and data on occupations of white- and blue-collar workers; reports on salary and wage distribution of Federal employees are published annually. General schedule is primarily white collar; wage system primarily blue collar. Data on Federal employment are also issued by the Bureau of Labor Statistics in its Monthly Labor Review and in Employment and Earnings and by the Bureau of the Census in its annual Public Employment.

Public lands.—The data on applications, entries, selections, patents, and certifications refer to transactions which involve the disposal, under the public land laws (including the homestead laws), of Federal public lands to non-Federal owners. In general, original entries and selections are applications to secure title to public lands which have been accepted as properly filed (i.e., allowed). Some types of applications, however, are not reported until issuance of the final certificate, which passes equitable title to the land to the applicant. Applications are approved when full compliance with the requirements of the laws is shown and become final entries (perfected entries) upon issuance of a final certificate. Patents are Government deeds which pass legal title to the land to the applicant. Certifications are issued in lieu of patents in connection with certain State selections.

Historical statistics.—Tabular headnotes provide cross- references, where applicable, to Historical Statistics of the United States, Colonial Times to 1970. See Appendix IV.

People for States and material literature of the Colonial Times to 1970.

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and MSAs may also be found in State and Metropolitan Area Data Book 1986. For cross-references, see Appendix V.

#### No. 472. FEDERAL BUDGET OUTLAYS IN CURRENT AND CONSTANT (1982) DOLLARS: 1985 TO 1987

[For flacal years ending in year shown; see text, section 9. Given the inherent imprecision in deflating outleys, the data shown in constant dollars present a reasonable perspective—not precision. The deflators and the categories that are deflated are as comparable over time as is feasible. See headnote, table 470. Minus sign indicates decline]

#### No. 486. FEDERAL INDIVIDUAL INCOME TAX RETURNS WITH ADJUSTED GROSS INCOME (AGI)— SUMMARY: 1970 TO 1985

[Includes Puerto Rico and Virgin Islands. Includes returns of resident allens; based on a sample of unaudited returns as filed. Taxability or nontaxability is determined by presence or absence of income tax after credits and additional tax for tax preferences. Classification as "nontaxable" generally based on each return as originally filed and does not reflect subsequent changes (amended returns, sudits, etc.). Adjusted gross income is grose income is closes from all sources subject to tax reduced by legally permitted subtractions such as: Expenses of operating a business or trade, contributions to individual Retirement Arrangements, moving expenses, etc. Data are not comparable for all years because of tax changes. See Statistics of Income Individual Income Tax Returns publications for a detailed explanation. See Appendix III. See Historical Statistics, Colonial Times to 1970, series Y 393-411, for related data)

ng. 491. Federal Individual Income Tax—Effective (Averagi) and Marqinal Tax Rates, for Selected Income Groups: 1864 to 1885

[Refers to income after exclusions. Effective rate represents tax labelity divided by stated income. The marginal tax rate is the percentage of the first additional dollar of income which would be paid in income tax. Conclusions assume the low income allowance, standard deduction, tax to bracket additional part of percent of adjusted gross income, whichever is greatest. Excludes self-emptional based on net income.

#### No. 505. FEDERALLY OWNED LAND AND COST OF LAND, BY PREDOMINANT USAGE: 1960 TO 1965

[As of end of flocal year; see text, section 9. Covers land in United States only (50 States and DC). Cost of land figures represent total cost of property owned in year shown and exclude unreserved public domain; public domain reserved for neitonal parks, national forests, military installations and other purposes; and historical sites acquired by methods other than by purchase. Properties are reported at actual or estimated cost as of data of acquisition without considering depreciation, obsolescence, or economic changes in value. For data on Federal land by State, see table 322]

Section 11

### Nationai Defense and Veterans Affairs

This section presents data on national defense and its human and financial costs; active and reserve military personnel; ships, equipment and aircraft; and federally sponsored programs and benefits for veterans. The principal sources of these data are the annual Selected Manpower Statistics issued by the Office of the Secretary of Defense; Annual Report of Administrator of Veterans Affairs, Veterans Administration, and The Budget of the United States Government, Office of Management and Budget. For more data on expenditures, personnel, and ships, see section 31.

Department of Defense (DOD).—The Department of Defense is responsible for providing the military forces of the United States. It includes the Office of the Secretary of Defense, the Organization of the Joint Chiefs of Staff, the Army, Navy, Air Force, and the defense agencies. The President serves as Commander in Chief of the Armed Forces; from him, the authority flows to the Secretary of Defense and through the Joint Chiefs of Staff to the commanders of unified and specified commands (e.g., Strategic Air Command).

Reserve components.—Reserve personnel of the Armed Forces consist of the Army National Guard, Army Reserve, Naval Reserve, Marine Corps Reserve, Air National Guard, Air Force Reserve, and Coast Guard Reserve. They provide trained personnel available for active duty in the Armed Forces in time of war or national emergency and at such other times as authorized by law.

The National Guard has dual Federal-State responsibilities and uses jointly provided equipment, facilities, and budget support. In peacetime, the National Guard is State-administered, and trained under the authority of the State Governors. The President is empowered to mobilize the National Guard and to use such of the Armed Forces as he considers necessary to enforce Federal authority in any State.

The ready reserve includes selected reservists who are intended to assist active forces in a war and the individual ready reserve who, in a major war, would be used to fill out active and reserve units and later would be a source of combat replacements; a portion of the ready reserve serves in an active status. The standby reserve cannot be called to active duty unless the Congress gives explicit approval. The retired reserve represents a low potential for mobilization.

Veterans Administration.—The Veterans Administration (VA) administers laws authorizing benefits for eligible former and present members of the Armed Forces, and for the beneficiaries of deceased members. Veterans benefits available under various acts of Congress include: Compensation for service-connected disability or death; pensions for nonservice-connected disability or death; vocational rehabilitation, education, and training; home loan insurance; life insurance; health care; special housing and automobiles or other conveyances for certain disabled veterans; burial and plot allowances; and educational assistance to families of deceased or totally disabled veterans, servicemen missing in action, or prisoners of war. Since these benefits are legislated by Congress, the dates they were enacted and the dates they apply to veterans may be different from the actual dates the conflicts occurred.

VA estimates of veterans cover all persons with active duty service during periods of war or armed conflict and until 1982 include those living outside the United States. Veteran population estimates for September 1982 are for the 50 States, the District of Columbia and Puerto Rico. Veterans whose active duty service was entirely during periods of peacetime are eligible for some veterans benefits and, where appropriate, are included in VA estimates.

Historical statistics.—Tabular headnotes provide cross- references, where applicable, to Historical Statistics of the United States, Colonial Times to 1970. See Appendix IV.

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and MSAs may also be found in State amd Metropolitan Area Data Book 1986. For cross-references, see Appendix V.

#### No. 506. NATIONAL DEFENSE OUTLAYS AND VETERANS BENEFITS: 1960 TO 1967

[For flexel year ending in year shown; see text, section 9. Includes outlays of Department of Defense, Veterans Administration, and other agencies for activities primarily related to national defense and veterans programs. For explanation of average annual percent change, see Guide to Tabular Presentation. Minus sign (-) indicates decline. See Historical Statistics, Colonial Times to 1970, series 7 472-473 and 7 476, for related data)

#### IO. 516. DEPARTMENT OF DEFENSE CONTRACT AWARDS, PAYROLL, CIVILIAN AND MILITARY PERSONNEL—STATES: 1964 TO 1966

its ending Sept. 30. Contracts refer to awards made in year specified; expenditures relating to awards may extend over all years. Payroll estimates cover active duty military and direct hire civilian personnel, including Army Corps of Engineers, in employees represent direct hire civilian employees; excluded are those who are not subject to Office of Management udget ceiling controls, such as summer aides. Military personnel in each department include a number of personnel in a set status. These personnel are in a travel, proceed, leave enroute, or temporary duty status while on permanent change tion (PCS) orders. The Navy and Air Force report these personnel at their location prior to their arrival at their new ment duty location. The Army includes these personnel in one category entitled "Undistributed," which also includes neel for which an exact location is undetermined]

tary awards for supplies, services, and construction. Net value of contracts of over \$25,000 for work in each State and DC. reflect impact of prime contracting on State distribution of defense work. Often the State in which a prime contractor is is not the State in which the subcontracted work is done. See also headnote, table \$14. Includes undistributed in a includes undistributed military personnel.

4 The Portsmouth Naval shipyard was reported at Portsmouth, New Nire, instead of Kittery, Maine.

to: U.S. Dept. of Defense, Prime Contract Awards by State, annual, Distribution of Personnel by State—by Selected na, annual; and Atlas/State Data Abetract for the United States and Selected Areas, annual.

X Not applicable. Includes countries not shown separately. Twenty-eight developed countries: see table 516 for selected countries; for complete list see source. The North Atlantic Treaty Organization. The meaning of the ratio of military expenditures to GNP differs somewhat between most Communist countries and non-Communist countries because of different estimating procedures. For details, see source.

<sup>-</sup> Represents zero. 

1 Figures are rounded and taken from Claudia D. Goldin, Encyclopedia of American Economic Milita p. 938.

1 Total cost to Cct. 1, 1995. For World War I and later wars, benefits are actual service-connected figures from 19 Annual Report of Veterans Administration. For serlier wars, service-connected veterans' benefits are estimated at 40 percents total, the approximate ratio of service-connected to total benefits ance World War I.

2 Total cost to 1995. Interest paymer are a very rough approximation based on the percentage of the original costs of each war financed by money creation and dat the difference between the level of public debt at the beginning of the war and at its end, and the approximate time required pay off the war debts.

4 Unknown.

2 Figures are rounded setimates.

Source: Originally presented in U.S. Congress, Joint Economic Committee, *The Military Budget and National Economic Patrilles*, 191st Congress, 1st seesion (statement of James L. Clayton); subsequently revised and updated by James L. Clayton, University of Utah, Salt Lake City, Utah.

#### No. 523, U.S. MILITARY SALES AND ASSISTANCE TO FOREIGN GOVERNMENTS; 1950 TO 1966

n millions of dollars, except as indicated. For flacal year ending in year shown; see text section 9. Department of Date (DOD) sales deliveries cover deliveries against DOD sales orders authorized under Arms Export Control Act, as well as ea and applicable legislation. For details regarding individual programs, see source)

#### No. 540. MILITARY RESERVE PERSONNEL: 1970 TO 1986

[In thousands. As of end of flecal year; see text, section 9. Excludes U.S. Coast Guard Reserve. The ready reserve includes selected reservists who are intended to assist active forces in a war and the individual ready reserve who, in a major war, would be used to fill out active and reserve units and later would be a source of combat replacements; a portion of the ready reserve serves in an active status. The standby reserve cannot be called to active duty unless the Congress gives its explicit approval. The retired reserve represents a low potential for mobilization]

RESERVE STATUS AND BRANCH OF SERVICE	1970	1975	1977	1978	1979	1980	1981	1982	1983	1984	1985	1986

Section 12

# Social Insurance and Human Services

This section presents data related to governmental expenditures for social welfare; governmental programs for old-age, survivors, disability, and health insurance (OASDHI); governmental and rail-road employee retirement; Individual Retirement Account, Keogh account and private pension plans; government unemployment and temporary disability insurance; Federal supplemental security income payments and aid to the needy; child and other welfare services; and Federal food programs. Also included here are selected data on workers' compensation, including black lung benefits; vocational rehabilitation; child support; child care; and philanthropic trusts and foundations.

The principal source for these data is the Department of Health and Human Services' (HHS) monthly Social Security Bulletin which presents current data on many of the programs and summary data in annual statistical supplements. Current data on employment security are published monthly in the Department of Labor's Unemployment Insurance Statistics. Data on the Medicare and Medicaid programs appear periodically in the Health Care Financing Administration's Health Care Financing Review (quarterly), Health Care Financing Notes, and Health Care Financing Program Statistics. Statistics on aid to families with dependent children (AFDC) are presented in the U.S. Social Security Administration's monthly publication, Public Assistance Statistics.

Social insurance under the Social Security Act.—Programs established by the Social Security Act provide protection against wage lose resulting from retirement; prolonged disability, death, or unemployment, and protection against the cost of medical care during old age and disability. The Federal OASDHI program provides monthly cash benefits to retired or disabled insured workers and their dependents and to survivors of insured workers. To be eligible, a worker must have had a specified period of employment in which OASDHI taxes were paid. A worker becomes eligible for full benefits at age 65, although reduced benefits may be obtained up to 3 years earlier; the worker's spouse is under the same limitations. Survivor benefits are payable to dependents of deceased insured workers. Disability benefits are payable to an insured worker under age 65 with a prolonged disability and to the disabled worker's dependents on the same basis as dependents of retred workers. Also, disability benefits are provided at age 50 to the disabled widow or widower of a deceased worker who was fully insured at the time of death. A lump sum benefit is generally payable on the death of an insured worker to a spouse or minor children.

Since July 1986, the Federal "Medicare" program has provided two coordinated plans for nearly all people age 65 and over: (1) A hospital insurance plan which covers hospital and related services and (2) a voluntary supplementary medical insurance plan, financed partially by monthly premiums paid by participants, which partly covers physicians' and related medical services. Since July 1973, such insurance also applies to disabled beneficiaries of any age after 24 months of eligibility and to persons with chronic kidney disease.

Retirement, survivors, disability, and hospital insurance benefits are funded by a payroll tax on annual earnings (up to a maximum of earnings set by law) of workers, employers, and the self-employed. The maximum taxable earnings are adjusted periodically through Federal legislation to reflect increasing income levels (see table 563). Tax receipts and benefit payments are administered through Federal trust funds. Special benefits for uninsured persons; hospital benefits for persons 65 and over with specified amounts of Social Security coverage less than that required for cash benefit eligibility; and that part of the cost of supplementary medical insurance not financed by contributions from participants are financed from Federal general revenues.

Unemployment insurance is presently administered by the U.S. Employment and Training Administration and each State's employment security agency. By agreement with the U.S. Secretary of Labor, State agencies also administer unemployment compensation for eligible ex-service members and Federal employees, unemployment assistance under tha Disaster Relief Act of 1970, workers assistance and relocation allowances under the Trade Act, and, until 1975, direct aid (training and related cash allowances) under Federal manpower acts.

Under State unemployment insurance laws, benefits related to the individual's past earnings are paid to unemployed eligible workers. State laws vary concerning the length of time benefits are paid and their amount. In most States, benefits are payable for 26 weeks and, during periods of high unemployment, extended benefits are payable under a Federal-State program to those who

have exhausted their regular State benefits. The basic benefit can vary among States by over 100 percent. Some States also supplement the basic benefit with allowances for dependents.

Unemployment insurance is funded by a Federal unemployment tax levied on the taxable payrolls of most employers. Taxable payroll under the Federal Act and most State laws is the first \$7,000 in wages paid each worker during a year. Employers are allowed a percentage credit of taxable payroll for contributions paid to States under State unemployment insurance laws. The remaining percent of the Federal tax finances administrative costs, the Federal share of extended benefits, and advances to States. About 97 percent of wage and salary workers are covered by unemployment insurance.

Retirement Programs for Government Employees.—The Civil Service Retirement System (CSRS) and the Federal Employees' Retirement System (FERS) are the two major programs providing age and service, disability and survivor annuities for Federal civilian employees. In general, employees hired after December 31, 1983 are covered under FERS and the social security program (OASDHI) and employees on staff prior to that date are members of CSRS and are covered under Medicare. CSRS employees were offered the option of transferring to FERS during 1987. There are separate retirement systems for the uniformed services (supplementing OASDHI) and for certain special groups of Federal employees.

State and local government employees are covered for the most part by State and local retirement systems similar to the Federal civil service retirement system. In many juriedictions these benefits supplement OASDHI coverage.

Workers' compensation.—All States provide protection against work-connected injuries and deaths, although some States exclude certain workers (e.g., domestic help). Federal laws cover Federal employees, private employees in the District of Columbia, and longshoremen and harbor workers. In addition, the Social Security Administration and the Department of Labor administer a "black lung" benefits program for coal miners disabled by pneumoconiceis and for specified dependents and survivors. Specified occupational diseases are compensable to some extent. In most States, benefits are related to the worker's salary. The benefits may or may not be augmented by dependents' allowances or automatically adjusted to prevailing wage levels.

Public aid.—State-administered public assistance programs (Ald to Families with Dependent Children (AFDC), emergency assistance and general assistance) and the Federal Supplemental Security Income (SSI) program administered by the Social Security Administration provide benefits to persons who qualify. AFDC and emergency assistance are in part federally funded while the costs of general assistance are met entirely with State and local funds.

The SSI program replaced Federal grants for aid to the aged, blind and disabled in the 50 States and the District of Columbia in 1974. Residents of the Northern Mariana islands became eligible in 1978. Federal grants continue for aid to the aged, blind and disabled in Guam, Puerto Rico and the Virgin Islands. The SSI program provides a minimum income for the aged, blind and disabled and establishes uniform national basic eligibility requirements and payment standards. Most States supplement the basic SSI payment.

Health and welfare services.—Programs providing health and welfare services are aided through Federal grants to States for child welfare services, vocational rehabilitation, activities for the aged, maternal and child health services, maternity and infant care projects, comprehensive health services, and a variety of public health activities.

Under Medicaid, all States (except Arizona) offer basic health services to eligible low-income persons. The cost of providing these services is shared by the Federal Government, but each State determines its own eligibility criteria and may set benefits above the minimum established by Federal law. Almost all recipients of cash welfare programs are automatically eligible. In addition, 31 States extend Medicaid to families that satisfy all but the income requirements for welfare and that either have incomes which meet State definitions of "medicaily needy" or incur medical expenses which lower their incomes to medically needy levels.

Noncash benefits.—The Bureau of the Census annually collects data on the characteristics of recipients of noncash (in-kind) benefits to supplement the collection of annual money income data in the Current Population Survey (see text, section 1 and section 15). Noncash benefits are these benefits received in a form other than money which serve to enhance or improve the economic well-being of the recipient. As for money income, the data for noncash benefits are for the calendar year prior to the date of the interview and are reported in the *Current Population Reports*, series P-60. The two major categories of noncash benefits covered are public transfers and employer or union-provided benefits to employees.

Statistical reliability.—For discussion of statistical collection, estimation, and sampling procedures and measures of statistical reliability applicable to HHS and Census Bureau data, see Appendix III

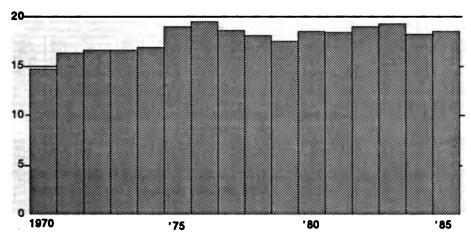

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to Historical Statistics of the United States, Colonial Times to 1970. See Appendix IV.

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and MSAs may also be found in State and Metropolitan Area Data Book 1986. For cross-references, see Research; V.

### No. 556. HOUSEHOLDS RECEIVING MEANS-TESTED NONCASH BENEFITS, 1980 TO 1985, AND BY POVERTY STATUS. 1985

[Households as of March of following year. Covers civilian noninstitutional population, including persons in the Armed Forces living off post or with their families on post. A means-tested benefit program requires that the household's income and/or assets tall below specified guidelines in order to qualify for benefits. The means-tested nonceah benefits covered are food stamps, free or reduced-price school functions, public or subsidized housing, and Medicaid. There are general trends toward under-setimation or noncesh beneficiaries. Households are classified according to poverty status of family or nonfamily householder; for explanation of poverty level, see text, section 14. Based on Current Population Survey; see text, section 1, and Appendix III.

#### NO. 557. CASH AND NONCASH BENEFITS FOR PERSONS WITH LIMITED INCOME: 1980 TO 1986

[For years ending September 30, except as noted. Programs covered in this table provide cash, goods, or services to persons who make no payment and render no service in return. In case of job and training programs and some educational benefits, recipients must work or study for wages, training allowances, stipends, grants, or loans. Most of the programs base eligibility on individual, household, or family income, but some use group or area income tests; and a few offer help on the basis of presumed need]

#### No. 570. MEDICARE—PERSONS SERVED AND REIMBURSEMENTS: 1975 TO 1984

[Persons served are enrollees who use covered services, incurred expenses greater than the applicable deductible amounts and for whom Medicare paid benefits. Reimbursements are amounts paid to providers for covered services. Excluded are retroactive adjustments resulting from end of facal year cost settlements and certain lump-sum interim payments. Also excluded are beneficiary (or third party peyor) liabilities for applicable deductibles, coinsurance amounts, and charges for non-covered services. Includes data for enrollees living in outlying territories and foreign countries]

ides payments by Social Security Administration and by Department of Labor. 

<sup>a</sup> Primarily payments made to dependents rists who died while on active duty in the Armed Forces.

s: U.S. Social Security Administration, Annual Statistical Supplement to the Social Security Bulletin.

s: U.S. Social Security Administration, Social Security Bulletin, December 1986 and unpublished data.

#### No. 585, BLACK LUNG BENEFIT PROGRAM—BENEFICIARIES AND PAYMENTS: 1975 TO 1987

(in thousands, except as indicated. Benefits payable to miners disabled because of pneumoconiceis and to their dependents and survivors as a result of Federal Coal Mine Health and Safety Act of 1999 and subsequent amendments and revisions. Claims by miners or their survivors are hendled by the Social Security Administration (SSA) or the Department of Labor, depending upon the date the claim was filed. Claims filed by a miner by June 30, 1973, and those filed by survivors by December 31, 1973 were processed by SSA. Benefits under the program as administrated by SSA are paid out of Federal general tax revenues. Claims filed by a miner between July 1 and December 31, 373 and all calms filed after December 1973 were processed by Department of Labor and are paid by either a responsible mine operator or the Department of Labor.

### NO. 583. PUBLIC AID—RECIPIENTS OF AND AVERAGE MONTHLY CASH PAYMENTS UNDER SUPPLEMENTAL SECURITY INCOME AND PUBLIC ASSISTANCE: 1970 TO 1986

In theseands, except as indicated. As of December, except as noted. Public assistance date for all years include Puerto Rico, Guarn, and Virgin Islands. SSI: Supplemental security income. SSI date are for federally administered payments only; see text, p. 332. Excludes vendor payments for medical care (i.e., payments made directly to suppliers of medical care). Beginning 1974, Federal SSI program replaced Federal grants for aid to the aged, blind, and deabled in the 50 States and DC; such grants continued for Puerto Rico, Guarn, and Virgin Islands. Residents of Northern Martens Islands became eligible for SSI in 1978. See also Appendix III and Historical Statistics, Colonial Times to 1970, series H 355-357]

NA Not available. X Not applicable. See footnote 4, table 588. Data compiled by U.S. Bureau of the Census. Total recipients as of June of AFDC and of Federal SSI as percent of resident population. For population figures used, see table 21. SSI totals include small number of recipients whose residence was "unknown." 1980 figures include payments to indochina refugees (total, \$23.6 million) which were not available by State. In addition, for all years, totals were reduced to reflect returned checks and overpayment refunds. Data for persons with Federal SSI payments only; State has State-administered supplementation. Data for persons with Federal SSI payments only; State supplementary payments not made.

#### No. 591. FEDERAL FOOD PROGRAMS: 1970 TO 1986

For flecal years ending in year shown; see text, section 9. Program data include Puerto Rico, Virgin Islands, Guam, American Samoa, and the Trust Territory when a Federal food program was operated in these areas. All participation data are average monthly figures except as noted. Participants are not reported for the special mile program, the runtiflon program for the elderly, and the commodity distribution programs. Cost data are direct Federal benefits to recipients; they exclude Federal administrative payments and applicable State and local contributions. Federal costs for commodities and cash-in-lieu of commodities are shown esparately from direct cash benefits for these programs receiving both]

Section 13

# Labor Force, Employment and Earnings

This section presents data on the labor force; its distribution by occupation and industry affiliation; and the supply of, demand for, and conditions of labor. The chief source of these data is the Current Population Survey conducted by the U.S. Bureau of the Census. Comprehensive historical data are published by the Bureau of Labor Statistics (BLS) in Labor Force Statistics Derived From the Current Population Survey: A Databook, BLS Bulletin 2096 and its supplement, and the Handbook of Labor Statistics. These volumes are supplemented on a current basis by the BLS monthly publications Employment and Earnings and the Monthly Labor Review. Detailed data on the labor force are also available from the Census Bureau's decennial census of population.

Types of data.—Most statistics in this section are obtained by two methods: household interviews or questionnaires, and reports of establishment payroll records. Each method provides data which the other cannot suitably supply. Population characteristics, for example, are readily obtainable only from the household survey, while detailed industrial classifications can be readily derived only from establishment records.

Household data are obtained from a monthly sample survey of the population. The Current Population Survey (CPS) is used to gather data for the week including the 12th of the month, and provides current comprehensive data on the labor force (see text, section 1). The CPS provides information on the work status of the population without duplication since each person is classified as employed, unemployed, or not in the labor force. Employed persons holding more than one job are counted only once, according to the job at which they work the most hours during the survey week.

Monthly data from the CPS are published by the Bureau of Labor Statistics in *Employment and Earnings* and the related reports mentioned above. Data presented include national totals by sex, race, Hispanic origin, and age, of the number of persons in the civilian labor force; the number employed, hours of work; industry and occupational groups; and the number unemployed, reasons for, and duration of unemployment. Monthly data from the CPS are also presented for 11 large States, New York City and the Los Angeles-Long Beach PMSA. Annual data shown in this section are averages of monthly figures for each calendar year, unless otherwise specified.

In addition to monthly data, the CPS also produces annual estimates of employment and unemployment for each State, 50 large metropolitan statistical areas and selected cities. These estimates are published by BLS in its annual *Geographic Profile of Employment and Unemployment*. More detailed geographic data (e.g., for counties and cities) are provided by the decennial population censuses.

Data based on establishment records are compiled by BLS and cooperating State agencies as part of an ongoing Current Employment Statistics Program. Data, gathered from a sample of employers who voluntarily complete mail questionnaires monthly, are supplemented by data from other government agencies and adjusted at intervals to data from government social insurance program reports. The estimates exclude proprietors of unincorporated firms, self-employed persons, private household workers, unpaid family workers, agricultural workers, and the Armed Forces. In March 1986, reporting establishments employed 10 million manufacturing workers (53 percent of the total manufacturing employment at the time), 15 million workers in nonmanufacturing industries (25 percent of the total in nonmanufacturing), and 12 million Federal, State, and local government employees (73 percent of total government).

The establishment survey counts workers each time they appear on a payroll during the reference week (as with the CPS, the week including the 12th of the month). Thus, unlike the CPS, a person with two jobs is counted twice. The establishment survey is designed to provide detailed industry information for the Nation, States, and metropolitan areas on nonagricultural wage and salary employment, average weekly hours, and average hourly and weekly earnings. Establishment survey data are published in *Employment and Earnings* and the *Monthly Labor Review*, cited above. Historical national and geographic data are published in *BLS Bulletin 1312-12*, *Employment, Hours, and Earnings, United States*, 1909-84 and Bulletin 1370-17, Employment, Hours, and Earnings, 1939-82 (data for States), and their supplements, and in the *Handbook of Labor Statistics*.

Labor force.—According to the CPS definitions, the civilian labor force comprises all civilians in the noninstitutional population 16 years and over classified as "employed" or "unemployed" according to the criteria below: Employed civilians comprise (a) all civilians, who, during the reference week, did any work for pay or profit (minimum of an hour's work) or worked 15 hours or more as unpaid workers in a family enterprise, and (b) all civilians who were not working but who had jobe or businesses from which they were temporarily absent for noneconomic reasons (liness, weather conditions, vacation, labor-management dispute, etc.). Unemployed persons comprise all civilians who had no employment during the reference week, who made specific efforts to find a job within the previous four weeks (such as applying directly to an employer, or to a public employment service, or checking with friends) and who were available for work during that week. Persons on layoff from a job or waiting to report to a new job within 30 days are also classified as unemployed if they are available for work. All other persons, 16 years old and over, are "not in the labor force." The labor force includes, in addition to the civilian employed and unemployed, members of the Armed Forces stationed in the United States. They are also included in the employed totals.

Beginning in 1982, changes in the estimation procedures and the introduction of 1980 census data caused substantial increases in the population and estimates of persons in all labor force categories. Rates on labor force characteristics, however, were essentially unchanged. In order to avoid major breaks in series, some 30,000 labor force series were adjusted back to 1970. The effect of the 1982 revisions on various data series and an explanation of the adjustment procedure used are described in "Revisions in the Current Population Survey in January 1982," in the February 1982 issue of *Employment and Earnings*. The revisions did not, however, smooth out the breaks in series occurring between 1972 and 1978, and data users should make allowances for them in making certain data comparisons.

Beginning in January 1985, the CPS estimation procedure was revised due to the implementation of a new sample design. A description of the changes and an indication of their effect on the national estimates of labor force characteristics appear in "Changes in the Estimation Procedure in the Current Population Survey Beginning in January 1985" in the February 1985 issue of Employment and Earnings. Overall, the revisions had only a slight effect on most estimates. The greatest impact was on estimates of persons of Hispanic origin, which were revised to the extent possible, back to January 1980.

Beginning in January 1986, the CPS estimation procedure was revised to reflect an explicit estimate of the number of undocumented immigrants (largely Hispanic) since 1980 and an improved estimate of the number of legal foreign-born emigrants for the same time period. The revisions had a comparatively small effect on the total population and labor force estimates, but their effect on the estimates of persons of Hispanic origin was more pronounced. As a result, data for Hispanics, to the extent possible, were again revised back to January 1980. An explanation of the changes and their effect on estimates of labor force characteristics appears in "Changes in the Estimation Procedure in the Current Population Survey Beginning in January 1986" in the February 1986 issue of Employment and Earnings.

Hours and earnings.—Average hourly earnings, based on establishment data, are gross earnings (i.e., earnings before payroll deductions) and include overtime premiums; they exclude irregular bonuses and value of payments in kind. Hours are those for which pay was received. Wages and salaries from the CPS consist of total monies received for work performed by an employed during the income year. It includes wages, salaries, commissions, tips, piece-rate payments, and cash bonuses earned before deductions were made for taxes, bonds, union dues, etc. Persons who worked 35 hours or more are classified as working full time (see table 614).

Industrial and occupational groups.—Establishments responding to the establishment survey are classified into industries on the basis of their principal product or activity (determined by annual sales volume) in accordance with the Standard Industrial Classification (SIC) Manual, Office of Management and Budget; 1972 is the latest issue. The SIC is a classification structure for the entire national economy. The structure provides data on a division and industry code basis, according to the level of industrial detail. For example, manufacturing is a major industrial division, food and kindred products (code 20) is one of its major groups. One of the ways this group is further divided is into meat products (code 201) and meat packing plants (code 2011). Periodically, the SIC is revised to reflect changes in the industrial composition of the economy. (A revised SIC Manual is forthcoming which will update the industry structure as of 1982).

Industry data derived from the CPS beginning in January 1983 utilize the industrial classification developed for the 1980 Census of Population. CPS data from 1971 to 1982 were based on the 1970 census classification system. Both population census systems are developed from the SIC. The 1970 system is based on the 1987 SIC, whereas, the 1980 system relates to the 1972 edition. Most of the industry categories were not affected by the change in classification.

The occupational classification system used in the 1980 census and in the CPS beginning in January 1983, evolved from the 1980 Standard Occupational Classification (SOC) system, first introduced in 1977. Occupational categories used in the 1980 census classification system are so radically different from the 1970 census system used in the CPS through 1982, that their implementation represented a break in historical data series. In cases where data have not yet been converted to the 1980 classifications and still reflect the 1970 classifications (e.g., table 655), comparisons between the two systems should not be made. To help users bridge the data gap, a limited set of estimates was developed for the 1972-1982 period based on the new classifications. The estimates were developed by means of applying conversion factors created by double coding a 20-percent sample of CPS occupational records for 6 months during 1981-82.— For further details, contact BLS.

Productivity—The Bureau of Labor Statistics (BLS) publishes data on productivity as measured by output per hour (labor productivity), output per combined unit of labor and capital input (multifactor productivity), and, for manufacturing industries, output per combined unit of capital, labor, energy, materials, and purchased service inputs. Labor productivity and related indexes are published for the business sector as a whole and its major subsectors: nonfarm business, manufacturing, nonfinancial corporations, 146 specific industries, and various functional areas of the Federal civilian government. Multifactor productivity and related measures are published for the private business sector and its major subsectors. Productivity indexes which take into account capital, labor, energy, materials, and service inputs are published for the 20 major 2-digit industry groups which comprise the manufacturing sector, and for the steel and motor vehicle industries. The major sector data are published in the BLS quarterly news release, Productivity and Costs and in the annual Multifactor Productivity Measures release. The specific industry productivity measures are published annually in the BLS Bulletin, Productivity Measures for Selected Industries, and the Handbook of Labor Statistics. Detailed information on methods, limitations, and data sources appears in the BLS Handbook of Methods, BLS Bulletin 2134-1 (1962), chapters 13 and 14.

Unions.—As defined here, unions include traditional labor unions and employee associations similar to labor unions. Data on union membership status provided by BLS are for employed wage and salary workers and relate to their principal job. Earnings by union membership status are usual weekly earnings of full-time wage and salary workers. The information is collected through the Current Population Survey. For a full description of the method of collection and comparability with earlier data, see "New Data on Union Members and Their Earnings" in the January 1985 issue of "Changing Employment Patterns of Organized Workers" in the February 1985 issue of the Monthly Labor Review. Collective bargaining settlements data are available for bargaining situations involving 1,000 or more workers in private industry and State and local government.

Recently, the *Union Sourcebook*, an annual publication by Leo Troy and Neil Sheflin of Rutgers University, has provided alternative estimates of union membership (see table 666). Due to differences in concept, method, scope, and reference period, BLS indicates a somewhat lower membership figure than does the *Sourcebook*. For example, BLS data are based on a sample survey and are subject to sampling error, while the *Sourcebook* data are figures covering all known labor organizations and are derived largely from financial reports of labor organizations. For a detailed discussion of the methodology used in the *Sourcebook* and differences with BLS data, see the *Sourcebook*.

Work stoppages.—Work stoppages include all strikes and lockouts known to BLS which last for at least one full day or shift and involve 1,000 or more workers. All stoppages, whether or not authorized by a union, legal or illegal, are counted. Excluded are work slowdowns and instances where employees report to work late, or leave early, to attend mass meetings or mass rallies.

Seasonal adjustment.—Many economic statistics reflect a regularly recurring seasonal movement which can be estimated on the basis of past experience. By eliminating that part of the change which can be ascribed to usual seasonal variation (e.g., climate or school openings and closings), it is possible to observe the cyclical and other nonseasonal movements in the series. However, in evaluating deviations from the seasonal pattern—that is, changes in a seasonally lusted series—it is important to note that seasonal adjustment is merely an approximation based on past experience. Seasonally adjusted estimates have a broader margin of possible error than the original data on which they are based, since they are subject not only to sampling and other errors, but also are affected by the uncertainties of the adjustment process itself.

Statistical reliability.—For discussion of statistical collection, estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau and BLS data, see Appendix III.

Historical statistics.—Tabular headnotes provide cross- references, where applicable, to Historical Statistics of the United States, Colonial Times to 1970. See Appendix IV.

Statistics for States and metropolitan statistical areas (MSAs).—Data for States and MSAs may also be found in State and Metropolitan Area Data Book 1986. For cross-references, we rependix V.

# No. 605. EMPLOYMENT STATUS OF THE NONINSTITUTIONAL POPULATION 16 YEARS OLD AND OVER: 1950 TO 1988

[in thousands, except as indicated. Annual averages of monthly figures. Based on Current Population Survey; see text, section 1 and Appendix III. See also *Historical Statistics, Colonial Times to 1970*, series D 11-19 and D 65-85]

<sup>&</sup>lt;sup>1</sup> Full-time workers include employed persons on full-time (35 hours or more per week) schedules and those working part-time (between 1 and 34 hours) for economic reasons who usually work full-time. Part-time workers include employed persons working part-time voluntarily and those working part-time for economic reasons, who usually work part-time. Employed persons with a job but not at work are distributed according to whether they usually work full- or part-time.
